    

            |        

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  		EQUIPMENT		
		New Foto-Bioreactor		69.604,88
				,
		<i>Agitation group:</i> Electrical motor 0, 18 kW, nominal speed 250 (variable), shaft length: 1750 mm, double mechanical seal, 10 stages of axial turbines (impeller type) with 4 blades. <i>**Note: The agitator has been designed for being modificated if necessary. Modifications on the design are not included in this quotation.</i>	1	
		Jacketed pipe section DN200 L=1500 mm	1	
		Reactor bottom/top in AISI 316 with required nozzles	1	
		Lighting system and cabling (power cabinet included in supply and electrical assembling section)	1	
		Ingold connection and caps for required nozzles	1	
		Gas sparger	1	
		Others	1	
		Pre-assembly, package and transport	1	
		FAT's tests (tightness and agitation tests with water only)	1	3.466,67
		Spare part: Jacketed pipe section DN200 L=1500 mm	1	4.856,25
				3.230,77
		Main gas condenser for the reactor 0,7 m ² in borosilicate (M-HECH 80/7)	2	83.312,67
		Stainless steel tank 250 I with jacket, isolation and magnetic agitator	_	
		Process gas buffer (50 I) in stainless steel	1	7.281,71
		Feeding and Harvesting pumps of liquid. Mod. Ecodos 0,55kW - Sanitary. Manufacturer: Lewa	3	10.237,50
		Acid and base pumps - Mod. 521Vi/R2C with freq. Variator. Manufacturer: Watson Marlow	2	3.525,00
		Gas compressor to discharge tank - Manufacturer: KNF (Double diaphragm)	1	4.656,25
		Vacuum pump for plant inertization (pump/filter/oil/others)	1	1.808,61
		Post cooler for gas analysis - Manufacturer: Sick Maihak	1	6.043,75
		Expansion vessel of reactor temperature control circuit	1	1.666,67
		Plate heat exchanger for heating/cooling reactor	2	6.622,52
		Circulation pump for reactor temperature control circuit	1	384,62
		Glass vessels 2 I capacity (acid and base)	2	270,00
		Exterior jacket for reactor refrigeration with air	1	2.533,33
		Transport and inspection of equipments	1	3.875,00
		TOTAL COST EQ	UIPMENTS	213.376 €
		SUPPLY AND MECHANICAL ASSEMBLING		
			1	60 4 40 00

PROJECT:		- COMPARTMENT C II	REF.																
DRAWING:	DD-8550-Z	1-100-02	PREPARED	RdM															
TAG	REF.	DESCRIPTION	QUANT.	COST															
		Sampling valve	3	5.413,60 €															
		Check valves for liquids	2	1.006,00 €															
		Check valves in PP (acid/base)	2	446,45 €															
		Sanitary check valves for gases - FLUIVAL	2	392,80															
		Check valves for gases (HOKE)	10	718,40 (															
		Pressure reducing for gases with pressure indicator	8	384,00 4															
		Safety Valves - Sanitary design	4	2.240,00															
		Safety Valves	10	1.840,00															
		Steam traps - Manufacturer: SARCO	6	1.296,00 (															
		Other valves	1	1.933,33 (															
		Certificates of materials 3.1B, FDA	1	1.062,50 €															
		Partial dismantle and re-assembling in MPP	1	3.529,41 €															
				5.529,411															
		Coordination of assembling works at field		0.000.00															
		Assembling coordinator	1	9.222,00 €															
		Engineer supervision	1	3.125,00 €															
		Diets and other expenses	1	777,78 €															
		TOTAL COST ( SUPPLY AND MECHANICA	L ASSEMBLING)	226.009,96															
		SUPPLY AND ELECTRICAL ASSEMBLIES           1-Electrical works

# **1.- SUBJECT AND ANTECEDENTS**

The Universitat Autònoma de Barcelona, hereafter UAB, takes part in the MELiSSA Project of the European Space Agency (ESA) and the European Space Research and Technology Centre (ESTEC). The Project objective is to study and define parameters to achieve life conditions in the space during long journeys.

Included in this research project there is a pilot plant installed in the Departament d'Enginyeria Química de l'Escola Tècnica Superior d'Enginyeria (ETSE) of the UAB. This pilot plant is based in several compartments linked together in a close loop to process and recycle the ambient air, water, food and feces.

**De Dietrich Equipos Químicos**, hereafter **DDEQ**, was commissioned by the UAB for the basic designing of compartment C-II of the pilot plant, according to DDEQ quotation DDE-K1764-SI.

The present proposal **EXS-M0127 Rev. 1** for the construction and delivery of the skid corresponding to compartment C-II, is based in the documentation and designs generated during this basic engineering project development, the Design Review conclusions during June 2.010 and MPP/ESA subsequent decisions.

The proposal includes the following concepts:

- Carry out the required detailed and constructive engineering works to build up the plant
- Delivery of all the materials, equipments and goods.
- Carry out the assembly (mechanical and cabling) of the plant
- Commissioning of the plant (DDEQ scope)
- Delivery of operation manual and technical dossier of the plant

## 2.- QUOTATION BASIS

To make this proposal the following documents (Data package) coming from the basic designing works of MELISSA – Compartment II Pilot Reactor, have been used:

P&ID Diagram DD-8550-Z1-100-01 **Rev. J** modified as per Basic Design Review conclusions based on meeting hold on June 7th, telecom hold on June 8th, mail from E. Peiro dated June 28th and last changes included in telecom hold on September 30th

Control Loops Diagram DD-8550-Z1-100-02 Rev. F (not up-dated until constructive engineering)

Main Equipments list Rev. B

Valves, filters and accessories list Rev. A (not up-dated until constructive engineering)

Piping list Rev. A (not up-dated until constructive engineering)

Instruments list Rev. A (not up-dated until constructive engineering)

Motor list Rev. A (not up-dated until constructive engineering)

Main Equipments Technical Specification Rev. B

Instruments Specification Rev. A (not up-dated until constructive engineering)

Electrical & Control Signals List Rev. A (not up-dated until constructive engineering)

Nevertheless, it has to be understood that a Prototype Pilot Plant might have some uncertainties that will not be clarified until the start up of the unit, and agreed changes might be required at that stage.

Oferta nº:	EXS-M0127 Rev. 3
Título:	MELiSSA module C-II supply
Cliente:	UAB / MPP

# 3.- SCOPE OF SUPPLY

# **3.1.-** Constructive Detail Engineering Contents

The Investment Budget has been calculated considering a Constructive Detail Engineering packet of 780h to execute the following works:

- 1. Definition and Execution of Final P&I'd.
- 2. Definition of utilities required and estimated consumptions.
- 3. Definition and Execution of Final Control Loops Diagram.
- 4. Final Lay-out drawing.
- 5. Final list of: Sensors, valves, lines and components.
- 6. Datasheets of sensors, valves and main equipments.
- 7. Constructive drawings of:
  - Liquid storage tanks and accessory vessels
  - Reactor
  - Lighting arrangement and supports
  - Frame, supports and skid
- 8. Sufficient drawings for the pipe assembly, including isometric drawing of process lines.
- 9. Final detailed control functional description.

As soon as this first Data package is ready it will be sent to MPP for revision and approval. Once the approval is received, the rest of the Detail Engineering will be carried out and the purchases orders to suppliers will star to be released.

At this stage MPP will deliver the detailed control functional description plus the sensor and motor list with their datasheets to the control supplier (Sherpa) to star working on the PLC definition and program, as well as the scada control screens.

A *"kick off meeting"* with the MPP's control contractor will be held at the UAB in order to clarify all the information provided by DDEQ to this contractor in the Data Package with points 1 to 9 (sensor list, motor list, automatic valves list, data sheets, control loops definitions, and final detailed control functional description). The estimated duration of this meeting is about one day and will be held with project engineers involved in the project.

- 10. HAZOP Analysis over final lay-out and P&ID
- 11. Prepare the "Test Protocols" for DDEQ Test and Commissioning as per stated in point 3.5. The protocols will be agreed with MPP.
- 12. Electrical diagrams for the electrical cabinet. CE marking and legalization of the new cabinet.
- 13. CE marking and legalization of liquid storage tanks and buffer.
- 14. Machines and Equipment Safety Evaluation, made by ICICT, S.A. (TÜV Rheinland Group), for a Pilot Plant module installed at the UAB facilities in Cerdanyola del Vallès.

Like for the C-IVa module the notified body will do a Study over Machines and Equipment security based on:

- R.D. 1215/97 about Minimum Security and Health Measures for the use of equipments.
- R.D. 1644/2008 about Safety in Machines, transposition of directive 2006/42/EC

Oferta nº:	EXS-M0127 Rev. 3
Título:	MELiSSA module C-II supply
Cliente:	UAB / MPP

Fecha:01/10/2010Autor:Roberto de MiguelArchivo:EXS-M0127 Rev 3.docx

- UNE-EN norms of application

The notified body will execute the following works:

- Hazards identification
- Risk analysis according the hazards detected
- Consensus about safety technical solutions based on UNE-EN norms

Final conclusions report and Machinery Conformity / Non Conformity Certificate emission.

#### NOTE: The delivery of points 10-14 will be according the attached planning.

To assure the traceability and control over the design, DDEQ will implement a "Design Changes Record". The objectives of this record are:

- a. Assure traceability over design changes: date, problem detected, reason, decision, final change introduced, possible delays, cost.
- b. Assure approval from both MPP and DDEQ.
- c. Decision about who will take the cost of the change.

NOTE: This document will be prepared by DDEQ and shared with MPP for approval.

# 3.2.- Mechanical Turn-key supply of the compartment C-II

It is included the mechanical turn-key supply of the mechanical and electrical equipment corresponding to the Compartment C-II of the Melissa Pilot Plant in accordance with the "Quotation basis" shown in point 2 and the Detail Engineering to be carried out according to point 3.1.

Previously to any purchase DDEQ will inform UAB which is the selected supplier or contractor. Should the UAB has any inconvenience regarding a supplier or contractor DDEQ will change to another one, unless this might have an economic impact on the project or cause a delay in the schedule.

Mechanical Erection and installation of the unit at DDEQ warehouse and UAB laboratories at Cerdanyola del Vallés

2 Copies of the final dossier

# **3.3.- Electrical supply for the compartment C-II**

Following we provide a description of the power and control system that is foreseen for the for the compartment II of MELiSSA Pilot Plant.

Documents of reference:

- Control Loops P&ID (DD-8550-Z1-100-02 rev. F) (not up-dated until constructive engineering)
- Electrical and control signals list rev. A (not up-dated until constructive engineering)
- Room Lay-Out (DD-8550-Z1-102-02 rev. 0) (not up-dated until constructive engineering)

#### **3.3.1.-** Situation of the electrical cabinet

The electrical cupboards are foreseen by DDEQ out of the skid in order to save space in it and considering the room constraints.

MPP mentioned that the C-I PLC cabinet could be moved to the corner near the GC in order to have more space for the C.II skid (to be confirmed by NTE).

Oferta nº:	EXS-M0127 Rev. 3
Título:	MELiSSA module C-II supply
Cliente:	UAB / MPP

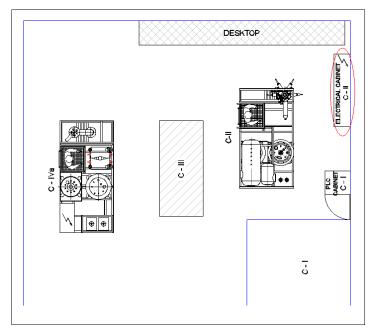

Fecha: 01/10/2010 Autor: Roberto de Miguel Archivo: EXS-M0127 Rev 3.docx

The designed electrical cabinet is 1800x2600x400 (height, width, depth) and it is conceptually divided in two different parts: power and control. By control we mean concentrate all the control signals from site instruments to the cabinet, to communicate with the main PLC and supervisor (delivered and programmed by others).

It can be physically divided too in order to be able to go through the pilot plant door.

The situation in the plant of the electrical cabinet is the next:

<u>NOTE:</u> For further details about dimensions refer to Room Lay-Out (DD-8550-Z1-102-02 rev. 0) included in the ANNEX II of the Engineering dossier.

#### 3.3.2.- Power and control panel

Supply of **power** and control panel, dimensions 1800 height, 2600 width and 400 depth, mechanized, mounted, connected and with the following elements and devices:

- 1 Base panel and accessories
- 1 Mounting board
- 1 Cooper bar and accessories
- 1 Overvoltage protection Class D IEC 1024-1
- 1 Light switch "On service"
- 1 General switch
- 1 Main ground-fault protection and thermal-magnetic circuit breaker
- 1 Emergency stop push button
- 1 "Emergency stop activated" indicator (red led)
- 1 White light indicator "Voltage in"
- 1 Acknowledge push button
- 1 Security check push button
- 1 Safety relay PREVENTA
- 2 Power supply 24Vdc/10 A
- 1 Single ground-fault protection for all frequency converters

Oferta nº:	EXS-M0127 Rev. 3
Título:	MELiSSA module C-II supply
Cliente:	UAB / MPP

Fecha: 01/10/2010 Autor: Roberto de Miguel Archivo: EXS-M0127 Rev 3.docx

- 1 General ground-fault protection for all the instrumentation
- 1 DIMMER 3-phase to control lightning columns
- 1 Transformer 3-phase 5KVA
- 1 Single thermal-magnetic protection for 10 lightning columns
- 1 Current metering and 4-20mA conversion
- 1 DIMMER protection security circuit against low load in the output
- 1 RS232/Ethernet converter
- $1 \rightarrow$  Wiring of the following control signals:
  - 71 Digital inputs
  - 52 Analogical inputs
  - 49 Digital outputs
  - 19 Analogical outputs
- 6 Galvanic isolators
- $1 \rightarrow$  Set of thermal-magnetic circuit breakers
- $6 \rightarrow$  Single-phase frequency converters 1,5KW
- 1 Set of Contactors
- $1 \rightarrow$  Fan and filter
- $1 \rightarrow$  Set of circuit breaker auxiliary switch
- $1 \rightarrow$  Set of connection strips
- $1 \rightarrow$  Elements and devices mounted and connected according CE directive
- $1 \rightarrow$  Design, technical managing and documentation

#### **IMPORTANT NOTES:**

- > It is not foreseen the connection to the plant main power/pneumatic supply.
- > All consumers will be equipped with ground-fault protection and thermal-magnetic circuit breaker.
- > The material included in these lists is the necessary for the electrical and control signals according to the Basic Engineering Design and conclusions arose from the Design review done in June.

#### 3.3.3.- Electrical erection and commissioning of compartment C-II

The estimated materials which are required are:

- 20 m galvanized cable tray 60x60 mm (without cover).
- 20 m galvanized cable tray 300x60 mm (without cover).
- Trays mounting accessories.
- 160 m shielded cable 4x0,5 mm²
- 20 m blue shielded cable 8x0,5 mm²
- 250 m cable 4x0,5 mm²
- 200 m shielded cable 4x1,5 mm²
- 300 m shielded cable 3x1,5 mm²

Oferta nº:	EXS-M0127 Rev. 3
Título:	MELiSSA module C-II supply
Cliente:	UAB / MPP

Fecha: 01/10/2010 Autor: Roberto de Miguel Archivo: EXS-M0127 Rev 3.docx

- 250 m flexible conduit.
- 10 m heat-shrinkable tubing.
- Other connection and mounting accessories.
- Cable signalling.
- 100 m pneumatic tubing.
- 3 emergency stop pushbuttons.
- Other pneumatic accessories.

#### IMPORTANT NOTES:

If it is physically possible the power cables will be installed as separated as possible from the signal ones.

#### 3.3.4.- Photo-bioreactor Lighting system

The illumination system consists of 250-270 halogen lamps which surround the glass jacketed pipe section (DN200, L=1500m).

The type of lamps used will be the specified in the technical note 62.2 and are: OSRAM 12V, 20W BAB 38°.

#### **3.3.5.- Lighting system structure**

The lights will be set-up on a portable structure made of stainless-steel with 270 lamps of 20W 12V each, surrounded by a hybrid stainless steel – transparent plastic fairing, through which the cooling air can circulate.

It will include 2 or 3 connection boxes sited on the half height of the structure.

These boxes will receive the cables from the lamps to link in 2 o 3 cables all the power to the main electric panel.

#### 3.3.6.- Phoenix material

Set of Phoenix materials:

- Analogical cable FLK 50/EX-DR/800
- Digital cable FLK 50/4X14/EZ-DR/800
- Interface modules VARIOFACE FLKM50/MOFI-TSX.
- Connectors PLC-V8/FLK14/OUT.
- Connectors PLC-V8/FLK14/IN.
- Relay PLC_RSP-24UC/21AU (24VDC).
- Plug-in bridges FBST 500-PLC BU
- Separating plates PLC-ATP-BK.

#### **IMPORTANT NOTES:**

➢ We have included Phoenix Contact cables of 8 m. These cables will have in both sizes de connectors for flat cable BUT WILL NOT INCLUDE THE ADAPTERS TO CONNECT TO THE QUANTUM MODULES. These adapters must be supplied by the PLC cabinet manufacturer.

Oferta n°: EXS-M0127 Rev. 3 Título: MELiSSA module C-II supply Cliente: UAB / MPP

# 3.4.- Manuals:

The manuals will be issued in English once points 1 to 9 of the Detail Engineering are approved by the MPP and while the module skid is pre-assembly in DDEQ's warehouse. The Operation Manuals should be delivered to MPP the latest at the same time the pilot skid is installed in the UAB's laboratories and the Technical Dossier no later than two months after the skid is installed.

#### 3.4.1.- Operation Manual:

The Operation Manual will contain:

- 1. INTRODUCTION SYSTEM DESCRIPTION
- 2. COMPONENT DESCRIPTION
- 3. PLANT CONTROL DESCRIPTION
- 4. PLANT SAFETY
- 5. GENERAL PROCEDURES
- 6. INSTALLATION START UP
- 7. INSTALLATION SHUT DOWN
- 8. NOMINAL OPERATION
- 9. SIP (STERILIZATION SEQUENCES)
- 10. SERVICE ON HARDWARE
- 11. PROCESS FOLLOW UP
- 12. CALIBRATIONS

#### 3.4.2.- Technical Dossier

The Technical Dossier will contain

- Final P&I'd. ("as built" one)
- Final Control Loops Diagram.
- Final Lay-out drawing.
- Constructive drawings of:
  - Liquid storage tanks and accessory vessels
  - Reactor
  - Lighting arrangement and supports
  - Frame, supports and skid
- Sufficient drawings for the pipe assembly, including isometric drawing of process lines.
- Final list of: Sensors, valves, lines and main equipments, and the corresponding Datasheets
- Final detailed control functional description.
- Electrical diagrams for the electrical cabinet. CE marking and legalization of the cabinet.

Oferta nº:	EXS-M0127 Rev. 3
Título:	MELiSSA module C-II supply
Cliente:	UAB / MPP

Fecha:	01/10/2010
Autor:	Roberto de Miguel
Archivo:	EXS-M0127 Rev 3.docx

- CE marking and legalization of the liquid storage tanks.
- Welding controls and welding certificates for the storage tanks.
- Certificate issued by ICICT, S.A. (TÜV Rheinland Group) after the "Machines and Equipment Security Evaluation" for the Pilot Plant module installed at the UAB facilities in Cerdanyola del Vallès.
- Compilation of operation, maintenance manuals and technical documents provided by the different suppliers of the equipment installed in the plant. Whenever it is possible this information will be supplied in electronic format as well.
- Spare part list for two years operation

# 3.5.- Test and commissioning of the Pilot Unit

# 3.5.1.- FAT by DDEQ

#### 3.5.1.1.- <u>Mechanical</u>

Once the skid is pre-assembled at DDEQ's warehouse and before the shipment to UAB's laboratories MPP will assist to FAT verification consisting in:

- Verify that final approved P&I'd diagram has been observed in the assembly
- Verify that the sensors, valves and equipments used are the specified ones according the project datasheets.
- Verify supports robustness.
- Test certificates and protocols filled up with the results.

<u>NOTE</u>: For the mechanical FAT commissioning of the pilot unit DDEQ will use its own protocols, elaborated as per point 11 in paragraph 3.1. At the end of mechanical FAT a record will be signed both by MPP and DDEQ and the shipment date to UAB's laboratories will be agreed. The duration of this FAT test will be 2 or 3 working days.

No test with fluids will be included in the mechanical FAT as there are not such services at DDEQ's warehouse.

#### 3.5.1.2.- <u>Electrical</u>

The cabling of the C-II module will be executed at UAB premises. Therefore the Electrical FAT will focus only in the power and control cabinets delivered by DDEQ. This FAT will take place at DDEQ's electrical contractor premises.

The Electrical FAT will consist in:

- Verify that all the sensors, automatic valves and equipments included in the P&I'd appears in the electrical diagrams.
- Verify that the electrical diagrams have been observed during the manufacturing of the cabinets.
- Test the power and control cabinets simulating the signals.
- Test the lighting system for the photo bio-reactor
- Test certificates and protocols filled up with the results.

<u>NOTE:</u> For the electrical FAT commissioning of the pilot unit DDEQ will use its own protocols, elaborated as per point 11 in paragraph 3.1, and tests will be done by DDEQ and electric

Oferta nº:	EXS-M0127 Rev. 3	Fecha:	01/10/2010
Título:	MELiSSA module C-II supply	Autor:	Roberto de Miguel
Cliente:	UAB / MPP	Archivo:	EXS-M0127 Rev 3.

.docx

supplier. An electrical FAT record will be signed both by MPP and DDEQ and the shipment date to UAB's laboratories will be agreed. The duration of this FAT test will be 3 working days.

#### 3.5.2.- SAT by DDEQ

#### 3.5.2.1.- <u>Mechanical</u>

The following tests have been considered for the plant commissioning based on a scheduled commissioning of fifteen (15) working days. The foreseen test team is:

- Project Engineer (DDEQ)
- Erection Manager (DDEQ)
- Mechanic official (DDEQ Contractor)
- MPP (permanent dedication of plant operator and technical staff)

The works to be done are:

- Pressure test with water for the liquid tanks and lines, as well as the reactor.
- Pressure test with compressed air of the Gas lines and buffers.
- Pressure test with steam of the steam and condensate lines. After that a resume of sterilization sequences will be done. Resume means:
  - Not waiting all the sterilization time required until the temperature is reached
  - Reactor, tanks and complete sections between reactor and tanks will be tested with steam during the accorded and defined time. Sequences for individual equipment will not be checked.
- Pressure test with water of the heating / cooling circuits of the jacketed equipment.
- Test certificates and protocols filled up with the results

<u>NOTE</u>: For the mechanical SAT commissioning of the pilot unit DDEQ will perform the tests using its own protocols, elaborated as per point 11 in paragraph 3.1. At the end of the mechanical SAT a record will be signed both by MPP and DDEQ.

#### 3.5.2.2.- <u>Electrical</u>

The following tests have been considered for the plant commissioning based on a scheduled commissioning of ten (10) working days. The foreseen test team is:

- Project Engineer (DDEQ)
- Erection Manager (DDEQ)
- Electrical official (DDEQ Contractor)
- MPP (permanent dedication of plant operator and technical staff)

The works to be done are:

- Check of the spin direction of motors.
- Check the power supply to all the instruments.
- Check the output signals from the instruments to the cabinet.
- Check alarms contacts in the cabinet and signals to be sent to the PLC.
- Simulate PLC input signals from the cabinet to instruments and control valves.

Oferta nº:	EXS-M0127 Rev. 3
Título:	MELiSSA module C-II supply
Cliente:	UAB / MPP

Fecha:01/10/2010Autor:Roberto de MiguelArchivo:EXS-M0127 Rev 3.docx

- Test of the lighting system of the reactor and the air cooling equipment.
- Initial configuration (settings and range definition) of instruments and sensors with process parameters supplied by MPP to the control supplier. The optimization and fine adjustment of the settings will be responsibility of the MPP and therefore its implementation over the equipments on site.
- Test certificates and protocols filled up with the results.

<u>NOTE</u>: For the electrical SAT commissioning of the pilot unit DDEQ will use its own protocols, elaborated as per point 11 in paragraph 3.1 and tests will be done by DDEQ and electrical supplier. At the end of the mechanical SAT a record will be signed both by MPP and DDEQ.

#### 3.5.2.3.- Communication commissioning

The communication commissioning will not be started until the mechanical and electrical commissioning (as per indicated in points 3.5.2.1 and 3.5.2.2) is finished and all the interconnecting cabling between DDEQ's cabinet and the PLC cabinet (supplied by others) is done. The interconnecting cabling is also out from DDEQ's scope.

The following tests have been considered for the plant commissioning based on a scheduled commissioning of five (5) working days. The foreseen test team is:

- Project Engineer (DDEQ)
- Project Engineer (Sherpa)
- MPP (permanent dedication of plant operator and technical staff)
- Electrical official (DDEQ Contractor + Sherpa Contractor)

The works to be done are:

- Verify the arrival of the inputs signal from DDEQ's cabinet to the PLC cabinet
- Verify the arrival of PLC commands to DDEQ's cabinet
- Verify consistency in the measurements in the onsite instruments with the PLC lectures.

We do not include any verification about the control loops program stability or performance, which is fully responsibility of the control supplier.

<u>NOTE</u>: For the electrical communication commissioning of the pilot unit DDEQ will use Sherpa's protocols. At the end of the electrical communication commissioning a record will be signed by MPP, SHERPA and DDEQ

At the conclusion of all the Test and Commissioning process as stated in points 3.5.1 and 3.5.2 a "Pilot Unit Acceptance Document" will be signed between MPP and DDEQ. From that moment, the risk and responsibility of the unit will be transferred to MPP, being then authorized to operate the plant alone or with other suppliers. At the same time, the guarantee period of twelve (12) months will start.

For further assistance or more extensive test and checks DDEQ will provide in point 6 "Price and Payment conditions" a daily net rate for engineers and technicians.

# 4.- RUN TEST OF THE MODULE

As an additional service to MPP, DDEQ is ready to assist to a complete run test of the pilot module when the control supplier has finalized the delivery and test of its scope of supply.

We have considered the assistance during five (5) working days of our Project Engineer to help MPP staff during the integration under operation of the control with the hardware.

Oferta nº:	EXS-M0127 Rev. 3
Título:	MELiSSA module C-II supply
Cliente:	UAB / MPP

Fecha:	01/10/2010
Autor:	Roberto de Miguel
Archivo:	EXS-M0127 Rev 3.docx

Leadership and execution of the Run Test is MPP responsibility and our task is to resolve doubts and give advices during the Trials. We will also take care of failures of the hardware but not accept any responsibility because of misuse, (in manual or automatic operation), of the hardware.

If additional presence over the five (5) foreseen days is required DDEQ will charge MPP according the rates indicated in point 6 "Price and Payment conditions".

# 5.- EXCLUSIONS

The following services and works have not been taken into account in the present quotation and, therefore, are explicitly exclude of the scope of supply:

- Mechanical connections to UAB utilities nets (steam, air, CO₂, water,...)
- Fan, filter and coolant battery for the lighting cooling system. Its installation (air tubes to the side of the C-II skid) and electrical connection (cabling to our cabinet) is not included. The electrical maneuver will be in our cabinet and the control ins Sherpa's scope.
- Gas analyzer connection different of what was implemented in Module C-IVa. If additional requirements are demanded by MPP DDEQ will implement a Design change in the *"Design Changes Record"* as indicated in point 3.1.
- Electrical interconnecting cabling from DDEQ's electrical cabinet for compartment C-II and the PLC cabinet, and from the PLC cabinet to the control room computer. Neither the main power supply from UAB's general line to DDEQ's cabinet is included.
- Carrying out the control commissioning neither commissioning of the PLC program and the supervisor system implemented in the control room computer. The operation manual of these elements is also out of our scope.
- Changes over design as per MPP Hazop analisys. If additional requirements are demanded by MPP DDEQ will implement a Design change in the *"Design Changes Record"* as indicated in point 3.1.
- Plant star-up with process fluids.
- Plant validation and/or qualification.
- Further engineering works, out of what is clearly stated in the present proposal, as per example:

<u>Note</u>: If any or the following works/tasks (or other not listed here) is required by the UAB, they will be invoiced separately accordingly to the "Daily rates" shown in point 5.2

- o Isometric drawings of the pipes but the process ones.
- Engineering works to accommodate UAB facilities or utilities to the requirements of the unit (connections, modifications in services nets,...)
- Drawings "as built" of the equipment showing the changes implemented over the approved detail constructive project but the P&ID.
- o Control Commissioning of the plant.
- o Engineering works to assure the right integration of the different modules of the Melissa loop.
- Environmental engineering concerning liquid or gaseous effluents
- o Edition of Plant Operation Protocols for the field Operator
- o Edition of Operational Emergencies and Alarms Management Protocol
- Edition of Sensor and Instrument Calibration Protocol

Oferta nº:	EXS-M0127 Rev. 3
Título:	MELiSSA module C-II supply
Cliente:	UAB / MPP

Fecha:	01/10/2010
Autor:	Roberto de Miguel
Archivo:	EXS-M0127 Rev 3.docx

- Any legalization or CE marking of the pilot unit exceeding the Study over Machines and Equipment security edited by ICICT, S.A. (TÜV Rheinland Group)
- External sub-supplier management outside the scope of supply of the unit described in this proposal
- Official or legal projects, if necessary or required, as per example: Pressure Equipment Installation Project, Low Voltage Project, ....
- Further assistance services, out of what is clearly stated in the present proposal, as per example:
  - o Commissioning of the equipment with real process fluids.
  - o Validation of the unit
  - o Once the commissioning phase is finished:
    - Optimization of the initial Control Settings and Alarm Set Points
    - Optimization of the Maintenance sequences and Cleaning instructions
  - o Others

# 6.- PRICE AND PAYMENT CONDITIONS

# 6.1.- Price of the plant

The price of the Pilot Unit corresponding to Compartment C-II of the Melissa Pilot Plant according to the base equipment described in the Budget Rev. 3 included as Attachment 1, and considering the tanks are manufactured by **BIOPROCESS/TECALSA**, is:

#### NET PRICE (VAT excluded): -.742.777€.-

The tank for media preparation and its electrical cabinet, pump, required instrumentation and manual valves as well as the assembling of this set has been quoted separately. The price for this system, according to the base equipment described in the Budget Rev. 2 included as Attachment 1 is:

#### NET PRICE (VAT excluded): -.20.584€.-

If the tanks are manufactured by TALLERES AJA the price is:

NET PRICE FOR THE PLANT (VAT excluded): -.735.637€.-

#### NET PRICE FOR MEDIA TANK (VAT excluded): -.18.885€.-

If the tanks are manufactured by **EQUINOX** the price is:

#### NET PRICE FOR THE PLANT (VAT excluded): -.721.205€.-

#### NET PRICE FOR MEDIA TANK (VAT excluded): -.18.195€.-

<u>Note:</u> The above price are a "fix price" according to "2.- Quotation Basis", that will allow the UAB/MPP to place an order to DDEQ in order to fulfill the required delivery schedule. If during the constructive detail engineering the relevant changes in the design appear they will be reflected in the "Design Changes Record" and the economic impact must be agreed between both parties.

Oferta nº:	EXS-M0127 Rev. 3
Título:	MELiSSA module C-II supply
Cliente:	UAB / MPP

### 6.2.- Daily rates for special assistance or test

Any further assistance, out of what is clearly stated in points 3.1 and 3.5 of this quotation, required by the MPP both, during the detail engineering (supervision of control engineering, other suppliers,...) or during the commissioning of the plant, will be invoiced according to the following daily rates:

Project Engineer (mechanical or electri	cal/control): 740 €/day
Assembling coordinator:	560 €/day
Mechanic:	485 €/day
Electrician:	485 €/day
Travel expenses:	According to destination

#### 6.3.- Order and Payment conditions

DDEQ proposes the following payment conditions:

- 20% down payment with the order, payment at 60 days after invoicing
- 25% at delivery of points 1 to 9 of the Detail Engineering as stated in point 3.1, payment at 60 days after invoicing
- 5% at delivery of points 10 to 13 of the Detail Engineering as stated in point 3.1, payment at 60 days after invoicing
- 20% at conclusion of mechanical FAT test as stated in point 3.5.1.1, payment at 60 days after invoicing
- 10% at conclusion of electrical FAT test as stated in point 3.5.1.2, payment at 60 days after invoicing
- 10% at delivery of manuals as stated in point 3.4.1, payment at 60 days after invoicing.
- 10% at the conclusion of the SAT commissioning as stated in point 3.5.2, payment at 60 days after invoicing.

#### 7.- PROPOSAL VALIDITY

This proposal is valid for a period of two natural months.

#### 8.- PROJECT PLANNING

In practice the development of the Project will be mainly influenced by UAB/MPP final purchasing decision and the administrative delays in order to place the order and contract writing. Also delays in intermediate approvals will cause a longer delivery time for the skid.

Assuming an optimal schedule in the development of the project, the schedule would be as shown in the annex.

#### 9.- GUARANTEE

DE DIETRICH EQUIPOS QUÍMICOS S.L., guarantees for one (1) operation year, against manufacturing defects or material failures, all the equipment supply and the erection and assembly works executed by its contractors. The guarantee applies only to the repair or the reposition of the defect element or equipment, once the defect is verified, checked and accepted as guarantee issue.

Elements subjected to wear and/or ageing are not covered by the present guarantee. For example (but not limited) mechanical seals, measurement probes, joints,...Neither is covered negligence in the operation of the equipment and normal maintenance or cleaning operations over the equipment, as well as, accidental failures of the unit.

Oferta nº:	EXS-M0127 Rev. 3
Título:	MELiSSA module C-II supply
Cliente:	UAB / MPP

Fecha:	01/10/2010
Autor:	Roberto de Miguel
Archivo:	EXS-M0127 Rev 3.docx

As mentioned before, the guarantee covers only the repair / replacement of the damaged/defect equipment. No other service or compensation is covered. For third party components or equipments, if any, the guarantee will be provided by the manufacturer.

#### **10.- GENERAL PROJECT CONDITIONS AND LIABILITY LIMITATION**

- The works covered under this proposal will be considered finished as soon as the commissioning tests stated in point 3.5 are finished satisfactorily and the "Pilot Unit Acceptance Document" is signed between MPP and DDEQ.
- Design will be implemented under the guidelines and process requirements provided by the UAB, and according to the good engineering practices known by DDEQ.
- A design review was conducted in June 2.010 to verify that the basic design elaborated fulfills the Technical Requirements (MPP/TN/2005/01 Version 1) and the Technical Note 62.2 edition 1. Some changes emerged from that review agreed between MPP and DDEQ and a new P&I'd version has been released, being the main basis for the current proposal. Again, it has to be understood that a Prototype Pilot Plant might have some uncertainties that will not be clarified until the real start up of the unit, and agreed changes might be required at that stage.
- The engineering works executed by DDEQ, and consequently equipment supply, do not mean that DDEQ has any liability in case the throughout put of the unit is less or different from the foreseen one. Process responsibility is charge of the MPP.
- DDEQ will not accept any liability for direct or indirect damages causes without the intention to harm as per example: production looses, third part claims, prestige looses, overall project delays,... DDEQ will not be responsible either for defects or damages arising from wrong or incomplete information delivered by the UAB/MPP.
- The MPP will designate a main interlocutor to evacuate through all the correspondence, question, doubts,..The same person will concentrate all the information and questions from the MPP to DDEQ.

#### 11.- CONFIDENTIALITY

All documents, data and information of the Project shared between MPP and DDEQ will be considered as confidential unless it is explicitly agree between both parts, is of public domain at the date of signing the contract or its use is necessary for the normal development of the project (inquiries or contracts to suppliers or contractors).Nevertheless, main contractors with access to relevant information must sign the confidentiality agreement too.

### 14. MOM OF THE DESIGN REVIEW AND FINAL DECISIONS

14.1. Design Review MOM 14.2. Final Decisions

Page 1/15

Our reference: MPP-MOM-10-2002(0)-EP-20100608

Date : 08-Jun-10

Meeting place: DEDIETRICH, SHERPA and ESA by teleconference with MPP

#### **SUBJECT: Basic design review CII**

#### Attendees:

Company	MELiSSA Pilot Plant	MELiSSA Pilot Plant	MELiSSA Pilot Plant	DDEQ	SHERPA	ESA
Names	E. Peiro (EP)	A. Fossen (AF)	F. Godia (FG)	R. de Miguel (RM)	O. Gerbi ( OG)	B. Lamaze (BL)

#### Distribution list: the attendees and the following listed persons

Company	ESA	
Names	C. Lasseur	

#### Main conclusions:

- A requirements compliance matrix has been prepared describing DDEQ CII design proposal, that should be agreed upon for the contract signature, including verification tasks and scheduling.

- MPP/ESA will update the CII Technical specifications as basis for the design, incorporating the agreed modifications.

- The main critical points were discussed and comments incorporated in the compliance matrix; final decisions from MPP/ESA will be taken during week 25.

- DDEQ will update the proposal and corresponding quotation accordingly.

#### Approval by all attendees:

Company	MPP	MPP	MPP	DDEQ	SHERPA	ESA

# **MINUTES OF MEETING**

Page 2/15

Our reference: MPP-MOM-10-2002(0)-EP-20100608

Item	Action #	Resp	Date
Agenda :			
1. Introduction			
2. Critical design points to be discussed			
3. Agreed actions			
Discussion :			
1. Introduction			
The purpose of the telecom was for MPP and DDEQ:			
1- to share with SHERPA and ESA:			
- the main points of the design where there is a main change from the			
preliminary proposal from DDEQ,			
- The main points where decisions have to be taken by MPP/ESA, giving			
the opportunity to raise questions to understand properly the proposed			
solutions			
2- check in detail the latest DDEQ proposal before a final decision is taken.			
Some general remarks were stated and agreed:			
- AF mentioned that the document Design acceptance_CII_V1.xls sent to			
the attendees ahead of the meeting including all the requirements			
described in the CII Technical Specifications doc. is in reality a			
compliance matrix (Annex 1) that should be agreed upon ahead of the			
contract and compiled along the manufacturing to demonstrate the			
compliance of the requirements.			
- The verification tasks should be clearly identified and scheduled in that			
matrix.			
2. Critical design points to be discussed			
EP explained that the main critical points refer to the following requirements			
(as they appear in the attached excel file, based on the CII Technical			
Specifications doc. numbering):			
- Req. 3 and 11: lighting system			

# **MINUTES OF MEETING**

Page 3/15

Our reference: MPP-MOM-10-2002(0)-EP-20100608			
- Req. 5: PBR gas loopgas and headspace inlet			
- Req. 7 and 16.6: gas analysers			
- Req. 9 and 25: agitator			
- Req. 13: control (tests)			
- Req. 14: redundancy of probes			
- Req. 16.3 and 16.3bis: level			
- Req. 18: sampling fee of cells			
- Req. 30: resistance of glass			
- Req. 34 and 35: aux. tanks gas loop management			
The comments and decisions on these points are included in the compliance matrix (Annex 1, highlighted in blue colour)			
3. Agreed actions			
- The requirements included in the Technical Specifications doc. will be updated by MPP/ESA in order to reflect the current status of the requirements on which CII manufacturing should be based.	1	MPP/ESA	
- A discussion on the main points will be held by MPP with UBP, in order to get their feedback	2	MPP	18.06
a) Need of an additional gas inlet direct to headspace vs. unique inlet to the bottom of the bioreactor			
b) CO2 and VFA analysis on-line			
c) Lack of redundancy of pH probe during batch phase (due to the availability of only one pH probe inside the PBR): criticity of this phase (duration, requirements)			
d) Alternative Gas loops management (PBR gas loop and auxiliary tanks gasloop)			
- MPP and ESA will decide next week on the above mentioned points, and beside these the illumination and level measurement issues, and will inform DDEQ in order that they can update and finalise the proposal.	3	MPP/ESA	18.06
- DDEQ will update the proposal accordingly.	4	DDEQ	30.06
- MPP will discuss with SHERPA about the points of the specification regarding control.	5	MPP	
SHERPA will prepare in the following weeks a proposal (joined with NTE) for			

# **MINUTES OF MEETING**

### Page 4/15

SHERPA

# Our reference: MPP-MOM-10-2002(0)-EP-20100608the delivery of the control hardware and software for CII, to be harmonized6

with the manufacturing proposal of DDEQ.			
- MPP will check if the redox fitting cam welcome a pH probe, in redundant pH probe will be finally required in the bottom	case a

Page 5/15

SPECIFICATION	PRIORITY	VERIFICATION METHOD	VERIFICATION SCHLOPTION	DESCRIPTION	REMARKS	DECISION	COMPLIANCE
The C-II will produce around 60-70 g <i>R</i> . <i>rubrum</i> DW/day consuming the volatile fatty produced in C-I (around 50 g/day). As a result, the total working liquid volume of the photobioreactor will be around 40 L		Productivity to be demonstrated during PQ tests (MPP responsibility)			Cooling air need to be filtered to comply with MPP ambient conditions (HEPA filtration for the axenic compartments)		
		Volume: Bioreactor layout and glass drawing	-	Total Vol. 47L illuminated+9 non- illuminated (total 56L); working vol. 40L illuminated+9 non-illuminated			YES
The illuminated zone of the photobioreactor will have a diameter around 0.20 m and the height will be $1.0 \text{ m}$ i.e. at least $0.6 \text{ m}^2$ .		Diameter and height: Bioreactor layout and glass drawing		Height to be consistent with requirement nº1 and nº4		Requirement to be rephrased: height at least of	
							YES
 There will be a regulable illumination system that will provide a light intensity at the external walls of the bioreactor between 0- 300 W/m2 (around 200 lamps). Lamp active spectrum will be in the R. rubrum active photosynthetic range.		Lighting system: dedicated layout and facility layout Blower efficiency: calculations Coherence with calculations of lighting needs provided by the MPP	Lighting system layout Pending on discussion with architecture area	270 lamps available distributed as in CIVa 1 cm distance from the glass jacket, 1700 m3/h cooling airflow, diameter 260 mm; the cooling is only dedicated to the lamps cooling, NOT AS AN ALTERNATIVE FOR THE COOLING WATER LOOP. The cooling air needs to be refrigerated in order to reduce flow and pipe diameter and filtered, taking into account: - The ventilation supply is too hot in summer, it's OK in winter - The ventilation supply is too hot in summer, it's OK in winter - Filtration of the air needs to be also considered - Dedicated commercial systems are available	refrigerated in order to reduce flow and pipe diameter and filtered, taking into account: - The ventilation supply is too hot in winter, it's OK in summer - The exhaust cannot be used w/o affecting the current ventilation system for comfort	Lighting system: sheel material needs to be transparent (DDEQ to modify) Discussion with Architecture Area (Enric font) will be held in order to check the availability of the current cooling machines and layout in the facility for the ubication of conducts and blower and cooler if necessary	
 The non-illuminable volume of the bioreactor (i.e. the dark volume of the headspace or the "bottom" space) has to be minimum. Therefore, the design should maximize the volume fraction that can be illuminated. The photobioreactor walls in the illuminated section will be made of a transparent material for the active photosynthetic range mentioned above.		PBR manufacturing drawing Glass material datasheet		Percentage of illuminated/non-illuminated around 80% (see Req.1)			
							YES

### 14.2 Final Decisions on the critical aspects of CII Design

During the Design Review of CII held on 08.06.10, the main critical points were discussed and comments incorporated in a dedicated compliance matrix, and it was agreed that final decisions from MPP/ESA would be taken during week 25, in order that DDEQ would update the proposal and corresponding quotation accordingly.

In the Progress meeting held in UAB between MPP and ESA on 17.06.10 (MPP-MOM-10-0001) a detailed analysis of C-II design was done, mainly to cover a short number of pending aspects to be finally defined to DDEQ, and therefore progress to a final proposal from their side. The main points discussed and decided where:

- the feeding of gas phase to the bioreactor will be maintained at two points: bottom and top of the reactor
- the gas loop to compensate gas phase changes when auxiliar tanks are filled or emptied has been discarded, and an auxiliar gas will be used instead. The use of N2 for this purpose was discarded (reasons: mass balance closure and potential uptake by *R.rubrum*)
- the on-line gas analysis line will not be defined at this point. A T connection will be installed, and initially only off-line analysis will be performed.
- It was confirmed the location of the pH probes, although in the start-up of the compartment (batch phase) this will not allow redundancy in the measurements.
- Level measurement will be finaly defined after the results of the tests on the load cells of Compartment IVa. If the tests are positive, load cells will be also considered for C-II. If the tests are negative, then the same alternative to load cells will be used in both reactors, such as differential pressure measurement, and an alternative system for measurement of both level and foam (CHARIS sensor) will be evaluated for redundancy.

After taking this decisions, MPP informed accordingly DDEQ, so that the final proposal would be prepared and submitted for approval (e-mail from E. Peiro on 28.06.10):

"- Conclusions of the lighting issue: the proposed 250-270 lamps is considered enough, provided that the distribution is compatible with the minimum distance needed for adequate design and maintenance and with the required positioning of sensors, tubing, valves, etc. around the reactor.

- Additional gas inlet direct to headspace vs. only to the bottom: as it is still a issue to be confirmed during the characterisation of the bioreactor (impact on level management, complete utilisation of VFA vs. potential stripping of compounds, etc.), we prefer to maintain, on top of the bottom inlet, the option of recirculating a fraction of the gas flow rate through the photobioreactor and the rest through the headspace, fraction to be variable.

- CO2 and VFA analysis on-line: as we still don't have a clear picture of the need of online measurement (potentially CO2 and VFA), the conclusion is of course to provide the adequate drying of the exhaust gas (cooler) and instrumentation for flow calculation, and to provide a "t" for future analyser connection for both inlet and outlet gas streams, and the space for a gas analyser like the one in CIVa (CO2) in case it will be finally installed; for VFA it would be probably just a connection with the existing GC, so space for a new analyser would not be required.

- Lack of redundancy of pH probe during batch phase: in principle the impact on this phase is not considered critical; anyway the possibility of replacing redox sensor by the pH sensor in the bottom is considered enough if redundancy is required in future for the batch phase.

- Gas loop management:

a) Bioreactor gas loop: having into account that a new loop around the compressor has been included in order to guarantee a stable flow, with a new regulating solenoid valve, it could be that the previous "safety" loop through the valve SV-2012-02 to be removed, taking into account that the new loop is already providing this safety, not based on a threshold but in a continuous way.

b) Auxiliary tanks gas loop: having into account the complexity of the overall design of this loop, with two oversized compressors and a big buffer tank, with the need of refrigeration, the limitation in the sequence of filling and emptying tanks, etc., and considering as well that the assurance of anaerobiosis in other compartments is managed

nowadays with external compressed gases (in the future closure of the MELiSSA loop could be different), we prefer to to the same in this case, so to provide the corresponding inert gas supply within the MPP Utilities frame for the hydraulic management of both the feeding and harvesting tank. We are requesting an offer for the installation of Argon bottles in the Department gas Station, and the corresponding pipelines up to the MPP. In that case, Argon in stead of helium would be used for both gasloops, in order to save costs.

- Level measurement: we need immediately a double feedback from METTLER: a) regarding the CIVa issue and b)from METTLER position, to propose or not the loadcell solution for CII. In case this is not existing or not clear, we'll install the differential pressure system and an alternative level instrument(CHARIS if tests are succesful, otherwise another system will be investigated and installed). If METTLER proposes the loadcells, the differential pressure system would be cancelled, and the loadcells would be installed provided that METTLER and DDEQ share with the MPP the risks of a potential failure of the system."
