1. OBJECT

The Universitat Autònoma de Barcelona, from now UAB, participate in the Project MELISSA (Micro-Ecological Life Support System Alternative), together with the European Space Agency (ESA), related to study how to establish the life conditions into the space during long time missions.

In the UAB facilities, there is installed a Pilot Plant consisting in several modules to study the different stages and processes of recycling and recovering of food, water and oxygen from wastes, i.e. CO_2 and organic wastes, using the light as a source of energy.

The UAB required to De Dietrich Equipos Químicos SL, from now DDEQ, to study the design and assembling of one of these modules, specifically the one defined as COMPARTMENT II.

DDEQ submitted to the UAB, one quotation, ref DDE-K 1764-SI, dated on Sept 23 2008, defined as: "Budget proposal for detail engineering works related with the design of a photo-bioreactor and ancillary equipment", in order to develop the design, engineering and economical investment cost for the design of that module.

The documentation of reference is basically:

- "Technical Note: 62.2 Preliminary design of the Compartment II Pilot Photobioreactor", and other documents from UAB.
- Information defined in different meetings held with MELiSSA people.
- Standards of design taken from the previous design of module Compartment IVa.

	PAGE 2 of 2	Ref. PRK-005449	

The UAB placed an order to DDEQ, reference: "contracte 2995/2008 d'enginyería del mòdul II per al projecte MELiSSA", dated on 12.01.09, for the execution of the works according conditions established in the scope of the quotation of DDEQ indicated.

With the present Project submitted to the UAB, DDEQ understands that it fulfil with the scope contemplated in the order of reference.

2. FUNCTIONAL SPECIFICATION

1 INTRODUCTION: The MELiSSA project

MELISSA is the acronym for Micro-Ecological Life Support System Alternative. This system consists of a loop of interconnected compartments envisaged to work as a complete unit. The driving element of MELISSA is the recovery of food, water and oxygen from organic waste, carbon dioxide and minerals. Based on the principle of an aquatic ecosystem, MELISSA is comprised of 5 compartments, colonized respectively by:

- thermophilic anoxygenic bacteria
- photo heterotrophic bacteria
- nitrifying bacteria
- photosynthetic bacteria and higher plants
- the last one being the crew

Such a system would be a key element to provide life support in any long term extraterrestrial manned activity as it would allow relieving the need for a constant food supply and waste disposal. A Moon or Mars planetary base or a permanent orbital station can be given as examples. Each compartment has a given objective within the complete biotransformation loop.

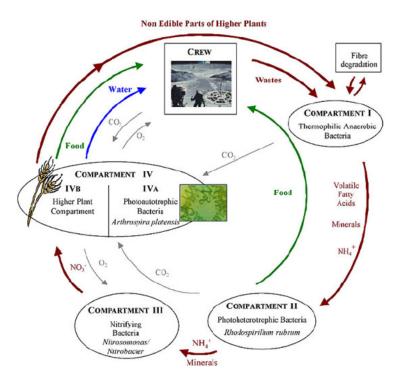

Figure 1: MELiSSA Advanced Loop Concept

1.1 Compartment II description:

The Compartment II of the MELiSSA Loop is the photo-heterotrophic compartment, which function is to consume the carbon sources that are not oxidized by the First Compartment. These carbon sources are mainly volatile fatty acids of low molecular weight.

The strain *Rhodospirillum rubrum* is grown in this compartment as it is capable to utilize all these carbon sources.

Due to the great degree of control that is needed in the operation of all the MELiSSA Compartments (particularly C-II), and for safety reasons, two main drivers have to be taken into account when designing and building this bio-reactor:

- the axenity of the bioreactor has to be ensured
- high standard of quality control has to be followed

1.2 **Functional specification document:**

This document claims to do a general description of all the plant control loops, control elements, output/input signals, alarms and lock out.

IMPORTANT NOTE: The alarms and lock outs described in this document are only a reference because there can be more alarms concerning the process which are not defined in this document.

The documents of reference for this section are:

- P&ID DD-8550-Z1-100-02 rev. F (P&ID: control loops)
- Instruments list rev. A
- Instruments specifications rev. A
- Digital/Analogical signals list rev. A

OBSERVATION:

The control loops list has been prepared by MPP and SHERPA. All the elements of the P&ID have been tagged according the UAB/MPP "Tag's and labeling" document and control loops list.

2 Loop 2000: Influent General

This loop includes the agitator, and all the instruments linked to another loop. At the moment, this loop only includes the agitation system of the feeding vessel VS 2000 01.

2.1 <u>Control elements:</u>

• <u>GP 4001 03 speed regulator</u>: Magnetic agitator. Feeding vessel agitation.

2.2 PLC output signals:

Equipment	Description		Signal Type
GP 2000 01	Start/Stop feeding tank agitator converter	DO	0/1
GP 2000 01	Feeding tank agitator speed set-point	AO	4-20 mA

2.3 PLC input signals:

Equipment	Description	I/O	Signal Type
GP 2000 01	Feeding tank agitator thermal protection	DI	0/1

2.4 Alarms and warnings:

Nr.	Тад	Variable	Alarm	Action	Lock out
1	GP 2000 01	Thermal protection	Err	To notify alarm to supervision

3 Loop 2001: Influent Liquid Flow Control

This loop regulates the reactor inlet liquid flow. Liquid input media is provided from two pumps (GP 2001 01 and GP 2001 02), working alternatively depending on the pre-filters blockage or pump maintenance.

Flow rate set point is provided by the supervision.

3.1 <u>Control elements:</u>

- <u>PS 2001 01/02</u>: Pressure switch. Pump membrane breakage detection.
- <u>PS 2001 03/04:</u> Pressure switch. Lines over-pressure detection.
- <u>DPT 2001 01:</u> Differential pressure transmitter. Differential pressure measurement for inlet liquid pre-filters (LF 2001 01/02) blockage control.
- FT 2001 01: Liquid mass flow meter. Reactor inlet liquid flow measurement.
- <u>DPT 2001 02</u>: Differential pressure transmitter. . Differential pressure measurement for inlet liquid filters (LF 2001 03/04) blockage control.
- <u>GP 2001 01/02 speed regulator</u>: Feeding pumps. Bioreactor inlet liquid flow regulation.

3.2 PLC output signals:

Equipment	Description		Signal Type
GP 2001 01/02	Start/Stop inlet pumps converter	DO	0/1
GP 2001 01	Start/Stop inlet pump GP 2001 01	DO	0/1
GP 2001 02	Start/Stop inlet pump GP 2001 02	DO	0/1
GP 2001 01/02	Flow set-point (inlet pumps)	AO	4-20 mA

	PAGE 8 of 46	Ref. PRK-005449	

3.4.1 Alarms and warnings description:

 $1 \rightarrow$ ALARM: The membrane of the feeding pump has broken.

The pump works with a sandwich membrane which permits a quickly damage detection. If work membrane is broken, the process product is conducted through the control membrane to the pressure switch. When the sensors alarm is activated, the pump can continue with working by means of a fourth membrane during a <u>maximum time of 24h.</u>

 $2 \rightarrow$ ALARM: There is a line overpressure. (Probably because of a process pipe manual valve is closed). Stop feeding pumps.

3 / 5 \rightarrow WARNING: The differential pressure (inlet/outlet of filter) has rise to -----bar. (Preventive maintenance)

4/6 \rightarrow ALARM: The differential pressure (inlet/outlet of filter) has rise to 2.5-3 bar. Stop feeding pumps.

It should be noted that the number of times the temperature is cycled from ambient to the sterilization temperature rather than the time at temperature determines the lifetime of the cartridge in steam.

To maximize the life of the cartridge, the differential pressure across the cartridge should not exceed 0.30 bar (4.4 psi) at 142°C (288°F).

4 Loop 2002: Feeding Tank Level Control

This loop controls the liquid level of the feeding tank. The level is measured with a guided microwave level transmitter.

The level measure is sent to the supervision.

4.1 <u>Control elements:</u>

• <u>LT 2002 01</u>: Level transmitter. Feeding tank (VS 2000 01) level measurement.

4.2 PLC output signals:

There is not any signal sent by the PLC in this loop.

4.3 PLC input signals:

Equipment	Description	I/O	Signal Type
LT 2002 01	Feeding tank level measurement	AI	4-20 mA

4.4 Alarms and warnings:

Nr.	Tag	Variable	Alarm	Action	Lock out

4.4.1 Alarms and warnings description:

- $1 \rightarrow$ WARNING: Feeding vessel level is at -----% or upper.
- $2 \rightarrow$ ALARM: Feeding vessel level is at -----% or lower. Stop the tank agitator (GP 2000 01)
- $3 \rightarrow$ ALARM: VS 2000 01 is empty. Stop feeding pump (GP 2001 01 or GP 2001 02)

5 Loop 2003: Feeding Tank Temperature Control

This loop regulates the temperature of the feeding tank medium. The temperature is measured with a temperature transmitter installed in the tank hoop.

The temperature is regulated by means of cool water flowing through the tank jacket. This flow is controlled with an on/off automatic valve installed in the jacket outlet.

5.1 <u>Control elements:</u>

- TT 2003 01: Temperature transmitter. Tank VS 2000 01 temperature measurement.
- <u>SV 2003 01</u>: Control valve. Feeding tank VS 2000 01 jacket cooling water outlet valve.

5.2 PLC output signals:

Equipment	Description	I/O	Signal Type
SV 2003 01	Open/Close cooling water outlet valve	DO	0/1

5.3 PLC input signals:

Equipment	Description		Signal Type
SV 2003 01	Cooling water inlet valve feedback	DI	0/1
TT 2003 01	Feeding tank temperature measurement	AI	4-20 mA

6 Loop 2004: Feeding Tank Pressure Control

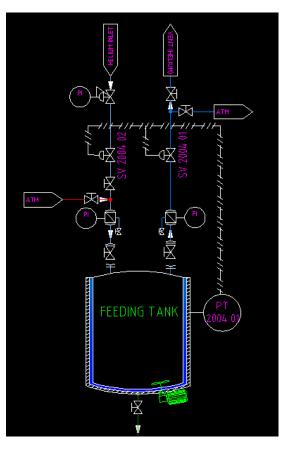

The feeding tank should be maintained, as all the plant, in anaerobic conditions.

The designed system has a way of allowing the inert gas (helium) into the tank, and a way to vent the gas when the pressure gets too high.

The helium is stored in a buffer tank of 40 I, which is used for the inertization of feeding and harvesting tank. This buffer tank operates at higher pressure than the feeding tank and for the vented gas storage is needed a gas compressor.

The system should operate at a slightly higher pressure than atmospheric.

A pressure transmitter measures the tank pressure and actuates over both automatic valves. When the pressure is lower than the set-point, the helium inlet is opened and when is higher, the helium is vented to the buffer tank.

6.1 <u>Control elements:</u>

- PT 2004 01: Pressure transmitter. Feeding tank VS 2000 01 pressure measurement.
- <u>SV 2004 01</u>: Control valve. Feeding tank VS 2000 01 vent pipe valve.
- <u>SV 2004 02</u>: Control valve. Feeding tank VS 2000 01 helium inlet pipe valve.
- SV 2004 03: Control valve. Compressor recycling valve.
- <u>PS 2004 01</u>: Pressure switch. Switch for compressor recycling control.

7 Loop 2005: Bioreactor General

This loop regulates the bioreactor agitation. The speed of agitation is variable by means of a converter. Agitation speed set point is provided by the supervision.

7.1 Control elements:

• <u>GP 2005 01 speed regulator</u>: Bioreactor agitation. Bioreactor agitation rate regulation.

7.2 PLC output signals:

Equipment	Description		Signal Type
GP 2005 01	Start/Stop bioreactor agitator converter	DO	0/1
GP 2005 01	Bioreactor agitator speed set-point	AO	4-20 mA

7.3 PLC input signals:

IMPORTANT NOTE:

The <u>red ox sensor</u> is not included in any loop. The description of the function of this sensor is pending to be defined. The signals related to the sensor are the next:

Equipment	Description		Signal Type
AT 2005 01	Redox measurement	AI	4-20 mA
TT 2005 01	Temperature measurement (AT 2005 01)	AI	4-20 mA

8 Loop 2006: Bioreactor Lightning Control

This loop regulates the light intensity. The intensity is controlled by the PLC and is not possible to do it locally.

The light intensity can be regulated depending on the feedback of real intensity measures.

8.1 Control elements:

• IRC 2006 01: Light supply system. Light intensity regulation.

8.2 PLC output signals:

Equipment	Description	I/O	Signal Type
IRC 2006 01	Light intensity set-point	AO	4-20 mA

9 Loop 2007: Bioreactor Temperature Control

This loop measures and regulates the bioreactor temperature and provides this information to the control system. The temperature is regulated by two different systems: refrigerating with cool water through reactor jacket and refrigerating with air through lights system jacket.

9.1 <u>Control elements:</u>

- <u>TT 2007 01</u>: Temperature transmitter. Bioreactor temperature measurement.
- <u>TT 2008 01</u>: Temperature transmitter. Bioreactor temperature measurement (from pH sensor).
- <u>TT 2008 02</u>: Temperature transmitter. Bioreactor temperature measurement (from pH sensor).
- <u>TT 2005 01</u>: Temperature transmitter. Bioreactor temperature measurement (from redox sensor).
- <u>TT 2013 02</u>: Temperature transmitter. Bioreactor temperature measurement (from O₂/dO₂ sensor).
- <u>BLWR 2007 01</u>: Air Extractor. Air circulation in bioreactor refrigeration system by air.
- <u>SV 2007 01</u>: Control valve. Cooling water outlet valve.
- <u>HX 2007 02</u>: Electrical resistance. Electrical resistance for water heating.

9.2 PLC output signals:

Equipment	Description		Signal Type
HX 2007 02	Start/Stop electrical resistance		0/1
BLWR 2007 01	Start/Stop air extractor		0/1
SV 2007 01	Open/Close cooling water outlet valve		0/1
PP 2007 01	Start/Stop the pump		0/1
BLWR 2007 01	Air extractor set-point	AO	4-20 mA

20 Loop 2018: Harvesting Tank Pressure Control

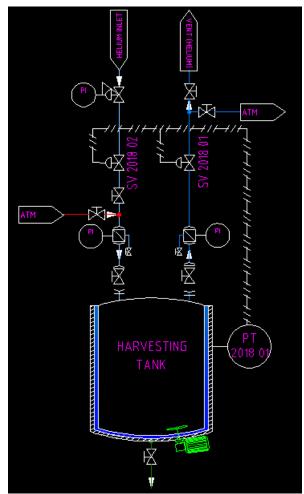

The harvesting tank should be maintained, as all the plant, in anaerobic conditions.

The designed system has a way of allowing the inert gas (helium) into the tank, and a way to vent the gas when the pressure gets to high.

The helium is stored in a buffer tank of 40 I, which is used for the inertization of feeding and harvesting tank. This buffer tank operates in higher pressure than the feeding tank and for the vented gas storage is needed a gas compressor.

The system should operate at a slightly higher than atmospheric.

A pressure transmitter measures the tank pressure and actuates over both automatic valves. When the pressure is lower than the set-point, the helium inlet is opened and when is higher, the helium is vented to the buffer tank.

20.1 Control elements:

- <u>PT 2018 01</u>: Pressure transmitter. Harvesting tank VS 2014 01 pressure measurement.
- <u>SV 2018 01</u>: Control valve. Harvesting tank VS 2014 01 vent pipe valve.
- <u>SV 2018 02</u>: Control valve. Harvesting tank VS 2014 01 helium inlet pipe valve.
- <u>SV 2004 03</u>: Control valve. Compressor recycling valve.
- <u>PS 2004 01</u>: Pressure switch. Switch for compressor recycling control.

BIOREACTOR COOLING WATER SYSTEM

1. Bioreactor Cooling Water System

1.1. Design Parameters

Energy from lights:

Lamps to be installed	N _{LAMPS}	=	200 lamps
Lights power	Р	=	20 W/lamp
Lights heat	Q_1	=	3,6 <i>KW</i>

Assuming lighting system at 100% capacity and that 90% of power is converted as heating, the heat coming from the lighting system is:

$$Q = 200 \ lamps \cdot 20 \ \frac{W}{lamp} \cdot 0.9 = 3600 \ W = 3.6 \ KW$$

• Cooling Water circuit:

Density		=	$1000 \ Kg/m^3$
Specific heat	C_p	=	$1 K cal/Kg \cdot {}^{\circ}C$
	C_p	=	$4,18 \text{ KJ}/\text{Kg} \cdot ^{\circ}\text{C}$
Assumed differential temperature	ΔT	=	2°C

1.2. Cooling Water Circuit

• <u>Heat to be removed during steady operation:</u>

Heat evolved by lighting	Q_1	=	3,6 <i>KW</i>
Heat evolved by agitator	Q_2	=	2,2 <i>KW</i>
Heat evolved by reaction	Q_3	=	Not considered
Total Heat	Q	=	5,8 <i>KW</i>

Observation: To make a worst case scenario calculation, the 100% of the agitator power is assumed as heating power.

$$Q = Q_1 + Q_2 + Q_3 = 3,6 \ KW + 2,2 \ KW = 5,8 \ KW$$

Required water flow:

 $Q = m \cdot C_P \cdot \Delta T$

$$m = \frac{Q}{C_P \cdot \Delta T} = \frac{5.8 \ KW \cdot 860}{\frac{1 \ Kcal}{Kg} \cdot \circ C} = 2494 \ \frac{Kg}{h} \approx 2.5 \ \frac{m^3}{h}$$

Design flow	Q_L	=	$3,0 m^3/h$
-------------	-------	---	-------------

2. <u>Heating Water for Bioreactor Start up</u>

2.1. Design parameters

Bioreactor volume (total calculated volume)	V	=	53 L
Assumed inlet temperature of media to reactor	T_1	=	15 °C
Assumed working temperature of reactor	T_2	=	30 ° C
Heating time required	t	=	30 min

2.2. Heating evolved

Observation: In this calculation, the heat coming from the agitator power is not considered (safety parameter).

$$Q = \frac{V \cdot C_p \cdot \Delta T}{t}$$

$$Q = \frac{\frac{53 l \cdot \frac{1 Kg}{1 l} \cdot 1 Kcal}{Kg \cdot C} \cdot (30 \circ C - 15 \circ C)}{30 \min \cdot \frac{1 h}{60 \min}} = 1590 Kcal_{h}$$

	DATE: 30/12/2009	PREPARED: J. C	UBERN			
PROCESS SYSTEMS		PAGE 4 of 16	Ref. PRK-005449			

2.3. Required water flow

Required water flow (see section 1.2)	Q_{L}	=	$2,5 m^3/h$
Heat evolved	Q	=	1590 Kcal/h

$$\Delta T = \frac{Q}{m \cdot C_p} = \frac{-1590 \ Kcal/h}{2.5 \ m^3/h} \cdot \frac{10^3 \ Kg}{1 \ m^3} \cdot 1 \ Kcal/Kg \cdot \circ C} = -0.64 \ \circ C$$

3. Heating Transfer through Reactor Jacket

3.1. Cooling (Steady operation)

3.1.1.Parameters

Transfer Area (D = 0,2 m / L = 1,4 m)	A	=	$0,88 m^2$
Water Flow	$Q_{\scriptscriptstyle L}$	=	$2,5 m^3/h$
Working temperature	Т	=	30 ° C
Requested heat transfer	Q	=	5,8 <i>KW</i>
		=	5000 Kcal/h

3.1.2. Maximum heat transfer through the reactor jacket

Water temperature in	$T_{W,IN}$	=	10 ° <i>C</i>
Water temperature out	$T_{W,OUT}$	=	11 °C
Reactor working temperature	Т	=	30 ° C
Logarithmic delta temperature	ΔTML	=	18,8 ° <i>C</i>
Transferred heat (through reactor jacket)	Q	=	2500 Kcal/h

3.1.3. Heat to be removed by the air system

Total heat to be removed	Q_T	=	5000 Kcal/h
Transferred heat (bioreactor jacket)	Q	=	2500 Kcal/h

Assuming the calculated available transfer of heat through the reactor jacket, the air system must be in operation during the reactor operation and must be able to remove a minimum heat of 2500 Kcal/h (at 100% of light intensity)

	PROCESS SYSTEMS	PAGE 9 of 16	Ref. PRK-005449			

6. General conclusions from the calculations

To achieve the maximum transference level through the reactor jacket, the water flow should be as highest as possible (turbulent flow).

- ✓ The circulating pump of the water circuit should be able to pump the sufficient water flow (≅ 4 m^3/h)
- ✓ The diameter of pipes in the water circuit to the reactor should be increase to 1", in order to increase the turbulence in the reactor jacket.
- ✓ It is really important to check the real flow of cool water (glycol) available in the plant because of can be the limiting factor.

AIR REFRIGERATION FOR LIGHTING SYSTEM

1. Heat generation

Energy from lights:

Lamps to be installed	N _{LAMPS}	=	200 lamps
Lights power	Р	=	20 W/lamp
Lights heat	Q_1	=	3,6 <i>KW</i>

Assuming lighting system at 100% capacity and that 90% of power is converted as heating, the heat coming from the lighting system is:

$$Q = 200 \ lamps \cdot 20 \ \frac{W}{lamp} \cdot 0.9 = 3600 \ W = 3.6 \ KW$$

2. Required air flow

OBSERVATION: Considered at worse conditions, that means to eliminate 100% of the heat generated.

Delta temperature	ΔT	=	10 ° <i>C</i>
Air density	ρ	=	1,29 Kg/m^2
Specific heat	C _P	=	$0,2 \ Kcal/Kg.^{\circ}C$

$Q = m \cdot C_P \cdot \Delta T$

$$m = \frac{Q}{C_P \cdot \Delta T} = \frac{3.6 \ KW \cdot 860 \ Kcal}{\frac{KW}{0.2 \ Kcal}} = 1548 \ \frac{Kg}{h} = 1200 \ \frac{m^3}{h}$$

6. General conclusions from the calculations

The air blower should be able to transport $1500 m^3/h$ or more and to have sufficient delta pressure.

The blower should be installed as near as possible of the reactor in order to avoid big delta pressures in the aspiration.

BIOREACTOR OUTLET GAS CONDENSER (ITEM HX 2012 01)

1. Data design

Working parameters considered are the next:

- Outlet gas flow: 120 l/h

- At working temperature, it is assumed that no direct liquid evaporation will be produced.

- It will be considered a flow of evaporated liquid to condenser because of the stripping of the liquid in the reactor by the gas flow.

- Assumed: 10% of liquid evaporated in relation to gas flow \Rightarrow $V = 120 \cdot 0.10 = 12 l/h$

2. Condenser calculation

Evaporation heat *)	λ	=	100 Kcal/Kg
Density *)	ρ	=	$0,8 \ kg/dm^3$
Evaporated liquid	V	=	12 <i>l/h</i>
Logarithmic delta temperature	ΔTML	=	70 ° <i>C</i>

*)OBSERVATION: Assuming organics of boiling point at 80 °C

$$Q = m \cdot \lambda = V \cdot \rho \cdot \lambda$$

$$Q = 12 \frac{dm^{3}}{h} \cdot \frac{0.8 Kg}{dm^{3}} \cdot 100 \frac{Kcal}{Kg} = 960 Kcal / h$$

	PAGE 1 of 6	Ref. PRK-005393	

4. UTILITIES: DESCRIPTIONS AND CONSUMPTIONS

The pilot plant where to install the MELIiSSA COMPARTMENT II must have the following available services:

- Water
- Cool water
- Low pressure steam
- Compressed air
- Technical gases lines: air, CO₂ and Helium/Argon
- Electrical supply

Document of reference: The estimated dates present in this document are derived from the section 2: "Calculations".

De Dietrich 📀	CODE PROJECT: DD- CUSTOMER: UAB	8558-Z1 Rev. A	
De Dietrich Equipos Químicos, S.L. Av. Príncep d'Asturies 43-45, 1r-5a	PROJECT: MELiSSA COMPARTMENT II		
E-08012 BARCELONA	DATE: 15/12/2009	PREPARED: J.GUBERN	
	PAGE 2 of 6	Ref. PRK-005393	

1. Water

The temperature control of the bioreactor is provided by a water flow through the reactor jacket. The circulated water is heated/cooled by an electrical resistance/plate heat exchanger. The design value of water flow during the steady operation is:

- Max. metric flow = $2,5 3 \text{ m}^3/\text{h}^*$
- Max. velocity = 2 m/s

*) NOTE: The water circuit is a closed pressurized circuit so, during steady operation, it has no water consumption except the purge losses.

2. Cool water (glycol)

Cooling water is used in three different plant equipments:

- In the plate heat exchanger (HX 2007 01) for the cooling of circulated water. The calculated flow of cool water is:

• Max. metric flow = $1.8 \text{ m}^3/\text{h}$

- In the condenser (HX 2012 01). This condenser will be installed in the head section of the PBR in order to condense the VFA of the outlet gas and part of the humidity. The condensate will return to the culture. The calculated flow of cool water in this case is:

• Max. metric flow = $0.5 \text{ m}^3/\text{h}$

De Dietrich 📀	CODE PROJECT: DD- CUSTOMER: UAB	8558-Z1	Rev. A
De Dietrich Equipos Químicos, S.L. Av. Príncep d'Asturies 43-45, 1r-5a	PROJECT: MELISSA COMPARTMENT II		
E-08012 BARCELONA	DATE: 15/12/2009	PREPARED: J.GU	JBERN
	PAGE 3 of 6	Ref. PRK-005393	

- In the feeding/harvesting vessel jacket for temperature controlling. The cooling water flow is controlled by a control valve installed in the cooling water outlet pipe. The calculated flow of cool water for each tank is:

• Max. metric flow = $0.5 \text{ m}^3/\text{h}$

NOTE: The available flow of cool water (glycol) in the pilot plant for Compartment II must be $3,3 \text{ m}^3/\text{h}$, being it the maximum consumption during the steady operation.

3. Low pressure steam

Steam is normally used to sterilize the plant or a part of it. It can be used too in the feed/harvest tanks jackets if it's necessary to heat the content of its. The maximum values of steam needed during the plant operation are:

• Max. mass flow = 20 Kg/h

NOTE: The steam consumption may vary remarkably depending on the sterilization operations frequency.

4. Compressed air

Compressed air is used for control valves actuators and for feeding and harvesting tanks jacket emptying.

NOTE: The consumption of compressed air is occasional and in any case is not continuous.

De Dietrich 📀	CODE PROJECT: DD- CUSTOMER: UAB	8558-Z1	Rev. A
De Dietrich Equipos Químicos, S.L. Av. Príncep d'Asturies 43-45, 1r-5a	PROJECT: MELISSA COMPARTMENT II		
E-08012 BARCELONA	DATE: 15/12/2009	PREPARED: J.GU	JBERN
	PAGE 4 of 6	Ref. PRK-005393	

5. Technical gases lines: air, CO2 and Helium/Argon

5.1 <u>Air</u>

Air circulation is required to refrigerate the bioreactor which is heated by the lighting system. The design value of the required air flow is:

• Max. metric flow = $1500 \text{ m}^3/\text{h}^*$)

*) This fan aspirates the air from the outside, and forces it to pass through the reactor air refrigeration system. The hot air is thrown out again to the outside of the pilot plant.

NOTE: This system has no air consumption. The air used is not service air.

5.2 CO2 and Helium/Argon

The compartment II will operate under anaerobic conditions so any air inlet will be completely avoided. Argon and/or CO_2 gas inlets will be provided.

NOTE: The consumption of its gases will be defined by the process.

De Dietrich 📀	CODE PROJECT: DD- CUSTOMER: UAB	8558-Z1	Rev. A
De Dietrich Equipos Químicos, S.L. Av. Príncep d'Asturies 43-45, 1r-5a	PROJECT: MELISSA (COMPARTMENT II	
E-08012 BARCELONA	DATE: 15/12/2009	PREPARED: J.GU	JBERN
	PAGE 5 of 6	Ref. PRK-005393	

6. Electrical supply

Compartment II electrical components are listed next:

- Feed/Harvesting pumps (GP 2001 01/02, GP 2015 01/02): These pumps allow the reactor media input and output.
- Acid/base feeding pumps (PP 2008 01/02): Reactor pH control is done actuating over these pumps.
- **Centrifuge air fan (BLWR 2007 01):** This fan aspirates the air from the outside, and forces it to pass through the reactor air refrigeration system. The hot air is thrown out again to the outside of the pilot plant.
- **Compressor (BLWR 2012 01):** This compressor is used to introduce the bioreactor outlet gases to the discharge vessel.
- **Compressor (BLWR 2004 01):** This compressor is used to introduce the helium to the helium buffer tank.
- **Reactor water circuit pump (PP 2007 01):** This pump allows the cooling water flow through the bioreactor glass jacket.
- Feeding tank magnetic agitator (VS 2000 01): This equipment provides the necessary agitation to the feed vessel.
- Harvesting tank magnetic agitator (VS 2014 01): This equipment provides the necessary agitation to the harvesting vessel.
- Electrical heater (HX 2007 02): This electrical resistance heats the reactor water circuit (jacket water) if necessary.
- **Sample gas cooler (HX 2012 02):** This equipment is used to post-condensate the residual humidity of the reactor outlet gas before entering the gas analyzer.
- Reactor lighting system (IRC 2006 01): The illumination system consists of 200 halogen lamps distributed homogenously around the glass part of the bioreactor. A voltage regulator allows having different light intensities.
- **Reactor agitation group (GP 2005 01):** The medium inside the reactor is agitated with a mechanical stirrer with the motor installed in the upper part of the reactor.

5. INVESTMENT

In the ANNEX III of the Project, there is included the quotation with the investment value of DDEQ, for the supply of the Melissa Pilot Plant Compartment II.

In that quotation there are detailed the investment costs for the construction and delivery of the indicated Compartment II, including:

- ✓ detail engineering pending works
- ✓ equipment supply
- ✓ piping, valves and accessories
- ✓ electric and control elements
- ✓ plant assembling
- ✓ commissioning

In the document, there is explained the scope of supply for each of the concepts considered.

The Annex of the document includes a complete part lists with the cost for each position.

A general planning for the development of the whole project is also included.

MELiSSA Pilot Plant

6. ANNEX I: LISTINGS

- 6.1. Equipment List
- 6.2. Piping List
- 6.3. Instrument List
- 6.4. Materials List
- 6.5. Electrical & Control signals List
- 6.6. Motors List

		EQUIPMENT LIST		
	uipos Químicos, S.L. sturies 43-45, 1r-5a ELONA Member of De Dietrich	EQUIPMENT		
CUSTOMER:	Universitat Autònoma	de Barcelona / MPP		
PROJECT:	MELISSA COMPART	MENT II DATE:	19/01/2010	PREPARED: J.GUBERN
DRAWING:	DD-8550-Z1-100-01	REV:	A	CHECKED: J. MESTRE
TAG	DENOMINATION	DESCRIPTION	SUPPLIER	OBSERVATIONS
R 2005 01 GP 2005 01	Photobioreactor	Bioreactor with mechanical agitation. Material: AISI 316L / jacketed glass	DDEQ	
IRC 2006 01	Lighting system	PBR Lighting system	DDEQ	
HX 2012 01	Condenser	Condenser for reactor outlet gases. Material: glass borosilicate 3.3	DDPS	Transfer area: 0,3 m ²
BLWR 2007 01	Extractor	Fan for PBR air cooling system	SODECA	Required air flow: 1500 m ³ /h
GF 2007 01	Air filter	Air filter for PBR air cooling system		
VS 2000 01 GP 2000 01	Feeding tank	Agitated tank in AISI 316L, provided with jacket for heating - cooling. Designed to operate at positive pressure. Magnetic driver		V=250 L
GP 2001 01 GP 2001 02	Feed pumps to reactor	Mettering pump in AISI 316 and PTFE membrane. Controlled by an electronic variator. Sterilizable.	LEWA	Required flow: 10 l/h P=20 bar
VS 2008 01	Acid vessel	Borosilicate glass vessel for acid addition	Fisher	V=5 L
VS 2008 02	Alkali vessel	Borosilicate glass vessel for alkali addition	Fisher	V=5 L
PP 2008 01	Acid pump	Peristaltic pump for acid dosing (pH control).	Watson Marlow	
PP 2008 02	Alkali pump	Peristaltic pump for alkali dosing (pH control).	Watson Marlow	
VS 2014 01 GP 2014 01	Harvesting tank	Agitated tank in AISI 316L, provided with jacket for heating - cooling. Designed to operate at positive pressure. Magnetic driver		V=250 L
GP 2015 01/02	Harvest pumps to reactor	Mettering pump in AISI 316 and PTFE membrane. Controlled by an electronic variator. Sterilizable.	LEWA	Required flow: 10 l/h P=20 bar

# **ELECTRICAL CABINET DESCRIPTION**

This document tries to do a description of the power and control system that is foreseen for the for the compartment II of MELiSSA Pilot Plant.

Documents of reference:

- P&ID (DD-8550-Z1-100-02 rev. F)
- Electrical and control signals list rev. A
- Room Lay-Out (DD-8550-Z1-102-02 rev. 0)

## 1 SITUATION OF THE ELECTRICAL CABINET

In previous meetings has been discussed with MELiSSA people the situation and dimensions of the compartment II and its electrical cabinet, which is foreseen out of the skid:

"The electrical cupboards are foreseen by DDEQ out of the skid in order to save space in the same considering the room constraints" (01.10.2009) "MPP mentioned that the CI PLC cabinet could be moved to the corner near the GC in order to have more space for the C.II skid (to be confirmed by NTE)" (01.10.2009)

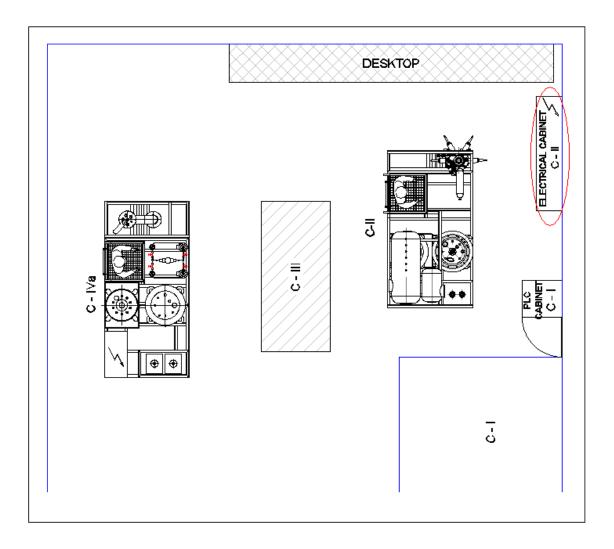

The designed electrical cabinet is 1800x2400x400 and it is conceptually divided in two different parts: power and control.

It can be physically divided too in order to be able to go through the pilot plant door.

	PAGE 2 of 6	Ref. PRK-005449			

The situation in the plant of the electrical cabinet is the next:

<u>NOTE:</u> For further details about dimensions refer to Room Lay-Out (DD-8550-Z1-102-02 rev. 0) included in the ANNEX II of this dossier.

# 2 SCOPE OF SUPPLY

## 2.1 Power and control panel

Supply of power and control panel, dimensions 1800 height, 2400 width and 400 depth, mechanized, mounted, connected and with the following elements and devices:

- $1 \rightarrow$  Base panel and accessories
- $1 \rightarrow$  Mounting board
- $1 \rightarrow$  Cooper bar and accessories
- 1→ Overvoltage protection Class D IEC 1024-1
- 1→ Light switch "On service"
- $1 \rightarrow$  General switch
- $1 \rightarrow$  Main ground-fault protection and thermal-magnetic circuit breaker
- $1 \rightarrow$  Emergency stop push button
- $1 \rightarrow$  "Emergency stop activated" indicator (red led)
- $1 \rightarrow$  White light indicator "Voltage in"
- $1 \rightarrow$  Acknowledge push button
- $1 \rightarrow$  Security check push button
- $1 \rightarrow$  Safety relay PREVENTA
- $2 \rightarrow$  Power supply 24Vdc/10 A
- $1 \rightarrow$  Single ground-fault protection for all frequency converters
- $1 \rightarrow$  General ground-fault protection for all the instrumentation
- $1 \rightarrow$  DIMMER 3-phase to control lightning columns
- $1 \rightarrow$  Transformer 3-phase 5KVA
- $1 \rightarrow$  Single thermal-magnetic protection for 7 lightning columns
- $1 \rightarrow$  Current metering and 4-20mA conversion
- $1 \rightarrow$  DIMMER protection security circuit against low load in the output
- $1 \rightarrow RS232/Ethernet converter$

De Dietrich 🔷	CODE PROJECT: DD-	8550-Z1	Rev. A

	PAGE 4 of 6	Ref. PRK-005449	

- $1 \rightarrow$  Wiring of the following control signals:
  - 38 Digital inputs
  - 43 Analogical inputs
  - 38 Digital outputs
  - 15 Analogical outputs
- $1 \rightarrow$  Set of galvanic isolators
- $1 \rightarrow$  Set of thermal-magnetic circuit breakers
- $7 \rightarrow$  Single-phase frequency converters 1,5KW
- $8 \rightarrow$  Contactors
- $1 \rightarrow$  Heater starter
- $1 \rightarrow$  Set of circuit breaker auxiliary switch
- $1 \rightarrow$  Set of connection strips
- $1 \rightarrow$  Elements and devices mounted and connected according CE directive
- $1 \rightarrow$  Design, technical managing and documentation

#### **IMPORTANT NOTES:**

- > It is not foreseen the connection to the plant power/pneumatic supply.
- The material included in these lists is the necessary for the electrical and control signals foreseen at the moment. (See "electrical and control signals list" included in ANNEX II of this dossier)

De Dietrich 🔷	CODE PROJECT: DD-	8550-Z1	Rev. A

## 2.2 Electrical mounting and setting-up in MELiSSA Pilot Plant

The materials which are required for this action are:

- 20 m galvanized cable tray 60x60 mm (without cover).
- 20 m galvanized cable tray 300x60 mm (without cover).
- Trays mounting accessories.
- 60 m shielded cable 4x0,5 mm²
- 20 m blue shielded cable 8x0,5 mm²
- 150 m cable 4x0,5 mm²
- 100 m shielded cable 4x1,5 mm²
- 200 m shielded cable 3x1,5 mm²
- 250 m flexible conduit.
- 10 m heat-shrinkable tubing.
- Other connection and mounting accessories.
- Cable signalling.
- 60 m pneumatic tubing.
- 3 emergency stop pushbuttons.
- Other pneumatic accessories.

NOTE: It is foreseen that the setting up of the plant will last approximately 2 weeks.

## 2.3 Photo-bioreactor Lighting system

The illumination system consists of 200 halogen lamps which surround the glass jacketed pipe section (DN200, L=1500m).

The type of lamps used will be the specified in the technical note 62.2 and are: OSRAM 12V,  $20W BAB 38^{\circ}$ .

#### 2.3.1 Lighting system structure

The lights will be set-up on a portable structure made of stainless-steel with 10 columns of 20 halogen lamps of 20W 12V.

It will include 2 or 3 connection boxes sited on the half height of the structure.

These boxes will receive the cables from the lamps to link in 2 o 3 cables all the power to the main electric panel.

## 2.4 Phoenix material (NTE supplied formerly)

Set of Phoenix materials.

- Interface modules VARIOFACE FLKM50/MOFI-TSX/Q.
- Connectors PLC-V8/FLK14/OUT.
- Connectors PLC-V8/FLK14/IN.
- Relay PLC_RSP-24UC/21AU (24VDC).
- Plug-in bridges FBST 500-PLC BU
- Separating plates PLC-ATP BK.

# **INTRODUCCIÓN**

# **Características generales**

Las bombas Ecodos son bombas dosificadoras con cabezal dosificador de membrana, actuado mecánicamente. La membrana tiene un diseño patentado, y esta formada por cuatro capas individuales de PTFE macizo, lo que le confiere una gran fiabilidad y resistencia.

#### Principales características de las bombas LEWA ECODOS:

- El diseño de cuádruple membrana permite que la bomba pueda seguir operando en caso de que se produzca una rotura de la misma. La rotura de membrana es señalizada a través de un dispositivo instalado en el cabezal dosificador.
- ✓ Vida útil de la membrana superior a 16.000 horas de operación en régimen continuo.
- ✓ Garantía de dos años para la membrana
- ✓ Herméticamente estancas
- Ninguna junta deslizante o empaquetaduras
- A prueba de funcionamiento sin engrase
- Fácil desmontaje y montaje de la cámara de dosificación
- Posibilidad de combinaciones de bombas múltiples
- Diseño compacto para ahorrar espacio
- Admiten periodos de operación prolongados
- ✓ Alta precisión de dosificación, desviación de ± 1%
- ✓ Piezas en contacto con el fluido pulidas Ra ≤ 0.8  $\mu$ m

# Comentarios

Bomba para 10 l/h máx y 0.25 l/h min de un producto de características similares al agua en cuanto a densidad y viscosidad.

Presión de descarga igual o inferior a 20 bar. Temperatura ambiente.

Bomba para 900 l/h máx de un producto de características similares al agua en cuanto a densidad y viscosidad.

Presión de descarga igual o inferior a 5 bar. Temperatura ambiente.

Ambos equipos pueden ser esterilizados con vapor durante periodos de tiempo de 20 minutos.

Improving your PERFORMANCE

# 323S/D and 323S/4D High-performance manual control variable speed pumps

# Technical information and features

- High performance microprocessor controlled pumps .
- Up to 2000 ml/min from three-roller 323S/D
- Up to 1600 ml/min from four-roller, lower pulsation 323S/4D
- Precision digital speed control 1rpm steps from 3 to 400rpm, 133:1 control ratio
- High visibility digital display and keypad lock .
- Compact design, chemical resistant case, contemporary styling
- Zero maintenance, quiet brushless DC motor .
- Rapid and simple tube loading flip-top pumphead .
- Snap fit extension pumpheads up to 6 channels of flow
- MemoDose facility for accurate single shot dosing
- Auto-restart for mains failure recovery and timer control
- Alternative pumpheads .
  - 314DW four roller pumphead for lower pulsation, 1.6mm wall thickness tube

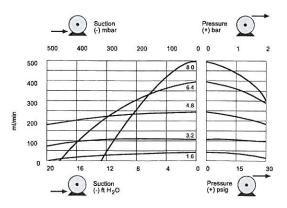

313DW2 three roller pumphead, 2.4mm wall tube for higher suction and delivery pressure 314DW2 four roller pumphead, 2.4mm wall tube for higher suction and delivery pressure

313X three roller and 314X four roller extension pumpheads for 1.6mm wall tube

#### Specification

Weight	4.7kg
Operational temperature range	4°C to 40°C
Noise	<70dBA at 1m
Control ratio	133:1
Standards	CE, IEC335-1, EN60529 (IP31)
Supply	1ph, 100-120V, 220-240V 50/60Hz, 100VA

#### Materials of construction

Drive	
Drive base	Powder coated aluminium casting
Drive top	Self-coloured ABS plastic
Pumphead	
Body rear	Glass filled polypropylene
Body front, body front extension	IXEF
Mounting plate, track and lever	IXEF
Rotor, tube clamp	Glass filled Nylon
Mounting plate locking tab	Glass filled Nylon
Rollers	MoS2 filled Nylon 6 (Nylatron)
Spindles	Electroless nickel plated, hardened steel
Fixings	Stainless steel
Bearings	Carbon steel - main shaft Sintered bronze - rollers

# **1.- SUBJECT AND ANTECEDENTS**

The Universitat Autònoma de Barcelona, hereafter UAB, takes part in the MELiSSA Project of the European Space Agency (ESA) and the European Space Research and Technology Centre (ESTEC). The Project objective is to study and define parameters to achieve life conditions in the space during long journeys.

Included in this research project there is a pilot plant installed in the Departament d'Enginyeria Química de l'Escola Tècnica Superior d'Enginyeria (ETSE) of the UAB. This pilot plant is based in several compartments linked together in a close loop to process and recycle the ambient air, water, food and feces.

**De Dietrich Equipos Químicos**, hereafter **DDEQ**, was commissioned by the UAB for the basic designing of compartment C-II of the pilot plant, according to DDEQ quotation DDE-K1764-SI.

The present proposal **EXS-M0127 Rev. 1** for the construction and delivery of the skid corresponding to compartment C-II, is based in the documentation and designs generated during this basic engineering project development.

The proposal includes the following concepts:

- Carry out the required detailed and constructive engineering works to build up the plant
- Delivery of all the materials, equipments and goods.
- Carry out the assembly (mechanical and cabling) of the plant
- Commissioning and start-up of the plant
- Delivery of operation manual and technical dossier of the plant

## 2.- QUOTATION BASIS

To make this proposal the following documents (Data package) coming from the basic designing works of MELISSA – Compartment II Pilot Reactor, have been used:

P&ID Diagram DD-8550-Z1-100-01 Rev. F

Control Loops Diagram DD-8550-Z1-100-02 Rev. F

Main Equipments list Rev. A

Valves, filters and accessories list Rev. A

Piping list Rev. A

Instruments list Rev. A

Motor list Rev. A

Main Equipments Technical Specification Rev. A

Instruments Specification Rev. A

Electrical & Control Signals List Rev. A

At this stage it is mandatory that MPP and DDEQ establish a protocol to verify that the basic design elaborated fulfills the Technical Requirements (MPP/TN/2005/01 Version 1) and the Technical Note 62.2 edition 1. It has to be understood that a Prototype Pilot Plant might have some uncertainties that will not be clarified until the start up of the unit, and agreed changes might be required at that stage.

Oferta n°: EXS-M0127 Rev. 1 Título: Module C-II supply Cliente: UAB / MPP

A document with the conclusion of this verification will be released and added to this quotation basis. In case that after the verification improvements or changes over the design should be implemented with relevant impact on the budget of the plant, a new revision of this quotation will be prepared.

# 3.- SCOPE OF SUPPLY

# **3.1.-** Constructive Detail Engineering Contents

The Investment Budget has been calculated considering a Constructive Detail Engineering packet of 780h to execute the following works:

- 1. Definition and Execution of Final P&I'd.
- 2. Definition of utilities required and estimated consumptions.
- 3. Definition and Execution of Final Control Loops Diagram.
- 4. Final Lay-out drawing.
- 5. Final list of: Sensors, valves, lines and components.
- 6. Datasheets of sensors, valves and main equipments.
- 7. Constructive drawings of:
  - Liquid storage tanks and accessory vessels
  - Reactor
  - Frame, supports and skid
- 8. Sufficient drawings for the pipe assembly, including isometric drawing of process lines.
- 9. Final detailed control functional description.

Once this first Data package is ready it will be sent to MPP for revision and approval. Once the approval is received the rest of the Detail Engineering will be carried out and the purchases orders to suppliers will star to be released.

At this stage MPP will deliver the detailed control functional description plus the sensor and motor list with their datasheets to the control supplier (Sherpa) to star working on the PLC definition and program, as well as the scada control screens.

A *"kick off meeting"* with the MPP's control contractor will be held at the UAB in order to clarify all the information provided by DDEQ to this contractor in the Data Package with points 1 to 9 (sensor list, motor list, automatic valves list, data sheets, control loops definitions, and final detailed control functional description).

- 10. HAZOP Analysis over final lay-out and P&ID
- 11. Prepare the "Test Protocols" for DDEQ Test and Commissioning as per stated in point 3.5
- 12. Electrical diagrams for the electrical cabinet. CE marking and legalization of the new cabinet.
- 13. CE marking and legalization of the liquid storage tanks.
- 14. Machines and Equipment Security Evaluation, made by ICICT, S.A. (TÜV Rheinland Group), for a Pilot Plant module installed at the UAB facilities in Cerdanyola del Vallès.

Like for the C-IVa module the notified body will do a Study over Machines and Equipment security based on:

- R.D. 1215/97 about Minimum Security and Health Measures for the use of equipments.
- R.D. 1495/86 about Security in Machines
- UNE-EN norms of application

Oferta n°: EXS-M0127 Rev. 1 Título: Module C-II supply Cliente: UAB / MPP

The notified body will execute the following works:

- Hazards identification
- Risk analysis according the hazards detected
- Consensus about safety technical solutions based on UNE-EN norms

Final conclusions report and Machinery Conformity / Non Conformity Certificate emission.

To assure the traceability and control over the design, DDEQ will implement a "Design Changes Record". The objectives of this record are:

- a. Assure traceability over design changes: date, problem detected, reason, decision, final change introduced, possible delays, cost.
- b. Assure approval from both MPP and DDEQ.
- c. Decision about who will take the cost of the change.

## 3.2.- Mechanical Turn-key supply of the compartment C-II

Mechanical turn-key supply of the mechanical and electrical equipment corresponding to the Compartment C-II of the Melissa Pilot Plant. The supply will be done in accordance to the "Quotation basis" shown in point 2 and the Detail Engineering to be carried out according to point 3.1.

Previously to any purchase DDEQ will inform UAB which is the selected supplier or contractor. Should the UAB has any inconvenience regarding a supplier or contractor DDEQ will change to another one, unless this might have an economic impact on the project or cause a delay in the schedule.

Mechanical Erection and installation of the unit at DDEQ warehouse and UAB laboratories at Cerdanyola del Vallés

2 Copies of the final dossier

## 3.3.- Electrical supply for the compartment C-II

Following we provide a description of the power and control system that is foreseen for the for the compartment II of MELiSSA Pilot Plant.

Documents of reference:

- Control Loops P&ID (DD-8550-Z1-100-02 rev. F)
- Electrical and control signals list rev. A
- Room Lay-Out (DD-8550-Z1-102-02 rev. 0)

## 3.3.1.- Situation of the electrical cabinet

In previous **meetings** has been discussed with MPP staff the situation and dimensions of the compartment II and its electrical cabinet, which is foreseen out of the skid:

"The electrical cupboards are foreseen by DDEQ out of the skid in order to save space in it and considering the room constraints" (01.10.2009)

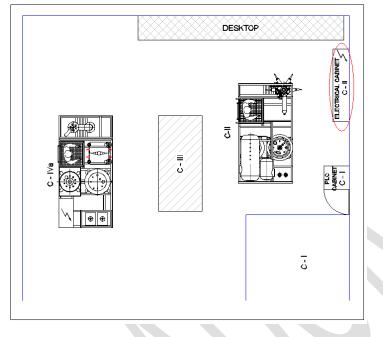

*"MPP mentioned that the C-I PLC cabinet could be moved to the corner near the GC in order to have more space for the C.II skid (to be confirmed by NTE)"* (01.10.2009)

The designed electrical cabinet is **1800x2400x400** and it is conceptually divided in two different parts: power and control. By control we mean concentrate all the control signals from site instruments to the cabinet, to communicate with the main PLC and supervisor (delivered and programmed by others).

Oferta nº:EXS-M0127 Rev. 1Título:Module C-II supplyCliente:UAB / MPP

It can be physically divided too in order to be able to go through the pilot plant door.

The situation in the plant of the electrical cabinet is the next:

<u>NOTE:</u> For further details about dimensions refer to Room Lay-Out (DD-8550-Z1-102-02 rev. 0) included in the ANNEX II of the Engineering dossier.

## 3.3.2.- Power and control panel

Supply of **power** and control panel, dimensions 1800 height, 2400 width and 400 depth, mechanized, mounted, connected and with the following elements and devices:

- 1 Base panel and accessories
- 1 Mounting board
- 1 Cooper bar and accessories
- 1 Overvoltage protection Class D IEC 1024-1
- 1 Light switch "On service"
- 1 General switch
- 1 Main ground-fault protection and thermal-magnetic circuit breaker
- 1 Emergency stop push button
- 1 "Emergency stop activated" indicator (red led)
- 1 White light indicator "Voltage in"
- 1 Acknowledge push button
- 1 Security check push button
- 1 Safety relay PREVENTA
- 2 Power supply 24Vdc/10 A
- 1 Single ground-fault protection for all frequency converters
- 1 General ground-fault protection for all the instrumentation
- 1 DIMMER 3-phase to control lightning columns
- 1 Transformer 3-phase 5KVA

Oferta nº:	EXS-M0127 Rev. 1
Título:	Module C-II supply
Cliente:	UAB / MPP

Fecha:	19/05/2010
Autor:	Roberto de Miguel
Archivo:	EXS-M0127 Rev 1.docx

De Dietrich PROCESS SYSTEMS DE DIETRICH EQUIPOS QUÍMICOS S.L.

- 1 Single thermal-magnetic protection for 7 lightning columns
- 1 Current metering and 4-20mA conversion
- 1 DIMMER protection security circuit against low load in the output
- 1 RS232/Ethernet converter
- $1 \rightarrow$  Wiring of the following control signals:
  - 38 Digital inputs
  - 43 Analogical inputs
  - 38 Digital outputs
  - 15 Analogical outputs
- $1 \rightarrow$  Set of galvanic isolators
- $1 \rightarrow$  Set of thermal-magnetic circuit breakers
- $7 \rightarrow$  Single-phase frequency converters 1,5KW
- $8 \rightarrow$  Contactors
- $1 \rightarrow$  Heater starter
- $1 \rightarrow$  Set of circuit breaker auxiliary switch
- $1 \rightarrow$  Set of connection strips
- $1 \rightarrow$  Elements and devices mounted and connected according CE directive
- $1 \rightarrow$  Design, technical managing and documentation

#### **IMPORTANT NOTES:**

- > It is not foreseen the connection to the plant power/pneumatic supply.
- The material included in these lists is the necessary for the electrical and control signals according to the Basic Engineering Design.

## 3.3.3.- Electrical erection and commissioning of compartment C-II

The materials which are required for this action are:

- 20 m galvanized cable tray 60x60 mm (without cover).
- 20 m galvanized cable tray 300x60 mm (without cover).
- Trays mounting accessories.
- 60 m shielded cable 4x0,5 mm²
- 20 m blue shielded cable 8x0,5 mm²
- 150 m cable 4x0,5 mm²
- 100 m shielded cable 4x1,5 mm²
- 200 m shielded cable 3x1,5 mm²
- 250 m flexible conduit.
- 10 m heat-shrinkable tubing.
- Other connection and mounting accessories.

Oferta n°: EXS-M0127 Rev. 1 Título: Module C-II supply Cliente: UAB / MPP

- Cable signalling.
- 60 m pneumatic tubing.
- 3 emergency stop pushbuttons.
- Other pneumatic accessories.

#### 3.3.4.- Photo-bioreactor Lighting system

The illumination system consists of 200 halogen lamps which surround the glass jacketed pipe section (DN200, L=1500m).

The type of lamps used will be the specified in the technical note 62.2 and are: OSRAM 12V, 20W BAB 38°.

#### **3.3.5.- Lighting system structure**

The lights will be set-up on a portable structure made of stainless-steel with 10 columns of 20 halogen lamps of 20W 12V each.

It will include 2 or 3 connection boxes sited on the half height of the structure.

These boxes will receive the cables from the lamps to link in 2 o 3 cables all the power to the main electric panel.

#### 3.3.6.- Phoenix material

Set of Phoenix materials. In module C-IV these elements were supplied by NTE but in C-II will be in our scope,

- Interface modules VARIOFACE FLKM50/MOFI-TSX/Q.
- Connectors PLC-V8/FLK14/OUT.
- Connectors PLC-V8/FLK14/IN.
- Relay PLC_RSP-24UC/21AU (24VDC).
- Plug-in bridges FBST 500-PLC BU
- Separating plates PLC-ATP BK.

# 3.4.- Manuals:

The manuals will be issued in English once points 1 to 9 of the Detail Engineering are approved by the MPP and while the module skid is pre-assembly in DDEQ's warehouse. The manuals should be delivered to MPP at the same time the pilot skid is installed in the UAB's laboratories.

#### 3.4.1.- Operation Manual:

The Operation Manual will contain:

- System description.
- Components description.
- Detailed Operation Sequences:
  - Plant Start-up.
    - o Liquid feeding

Oferta nº:EXS-M0127 Rev. 1Título:Module C-II supplyCliente:UAB / MPP

- o Reactor start-up
- Reactor jacket fill up and temperature control
- o Liquid harvesting
- o pH control reactive addition
- o Gas feeding
- o Gas outlet regulation
- Temperature regulation in the jacketed equipment.
- o Inert loading to the buffers
- Plant Stop. Description by homogeneous conjunctions:
  - o Gas feeding stop
  - o Gas outlet stop
  - Liquid feeding stop
  - o Liquid harvesting stop
  - Reactor stop
  - o Reactor jacket emptying
  - o Jackets Heating/cooling systems stop
  - o pH control reactive addition stop
  - o Buffers emptying
- Microorganism inoculation sequence
- Pumps and filters installed in Stand-by change sequence.
- Sterilization:
  - o Tanks sterilization
  - o Reactor sterilization
  - o Pumps sterilization
  - Filters sterilization
- Safety advices
- Service on hardware
- Calibrations advices
- Cleaning
- Control Loops Description and Initial Settings configuration of process parameters supplied by MPP to the control supplier. The optimization and fine adjustment of the settings will be responsibility of the MPP. If during the optimization and adjustment of the settings problems might arise due to the equipment supply, DDEQ will provide assistance to the MPP team.
- Alarms Description and Initial Set Points. The alarm management protocol will be responsibility of the MPP.

#### 3.4.2.- Technical Dossier

- Check list of standard controls (routine maintenance and service on hardware) to be executed by the plant operator
- Compilation of operation, maintenance manuals and technical documents provided by the different suppliers of the equipment installed in the plant. Whenever it is possible this information will be supplied in electronic format as well.
- Spare part list for two years operation

Oferta n°: EXS-M0127 Rev. 1 Título: Module C-II supply Cliente: UAB / MPP

# 3.5.- Test and commissioning of the Pilot Unit

## 3.5.1.- FAT by DDEQ

#### 3.5.1.1.- Mechanical

Once the skid is pre-assembled at DDEQ's warehouse and before the shipment to UAB's laboratories MPP will assist to FAT verification consisting in:

- Verify that final approved P&I'd diagram has been observed in the assembly
- Verify that the sensors, valves and equipments used are the specified ones according the project datasheets.
- Verify supports robustness.

<u>NOTE:</u> A mechanical FAT record will be signed both by MPP and DDEQ and the shipment date to UAB's laboratories will be agreed. The duration of this FAT test will be 2 or 3 working days.

No test with fluids will be included in the mechanical FAT as there are not such services at DDEQ's warehouse.

#### 3.5.1.2.- Electrical

The cabling of the C-II module will be executed at UAB premises. Therefore the Electrical FAT will focus only in the power and control cabinets delivered by DDEQ. This FAT will take place at DDEQ's electrical contractor premises.

The Electrical FAT will consist in:

- Verify that all the sensors, automatic valves and equipments included in the P&I'd appears in the electrical diagrams.
- Verify that the electrical diagrams have been observed during the manufacturing of the cabinets.
- Test the power and control cabinets simulating the signals.
- Test the lighting system for the photo bio-reactor

<u>NOTE:</u> An electrical FAT record will be signed both by MPP and DDEQ and the shipment date to UAB's laboratories will be agreed. The duration of this FAT test will be 2 working days.

## 3.5.2.- SAT by DDEQ

#### 3.5.2.1.- Mechanical

The following tests have been considered for the plant commissioning based on a scheduled commissioning of fifteen (15) working days. The foreseen test team is:

- Project Engineer (DDEQ)
- Erection Manager (DDEQ)
- Mechanic official (DDEQ Contractor)
- MPP (permanent dedication of plant operator and technical staff)

The works to be done are:

- Pressure test with water for the liquid tanks and lines, as well as the reactor.
- Pressure test with compress air of the Gas lines and buffers.

Oferta nº:	EXS-M0127 Rev. 1	Fecha:	19/05/2010
Título:	Module C-II supply	Autor:	Roberto de Miguel
Cliente:	UAB / MPP	Archivo:	EXS-M0127 Rev 1.docx

De Dietrich PROCESS SYSTEMS DE DIETRICH EQUIPOS QUÍMICOS S.L.

- Pressure test with steam of the steam and condensate lines. After that a resume of sterilization sequences will be done. Resume means:
  - Not waiting all the sterilization time required until the temperature is reached
  - Not probing all the sterilization sequences but: tanks and complete sections between reactor and tanks. Sequences of individual equipment will not be checked.
- Pressure test with water of the heating / cooling circuits of the jacketed equipment.
- Test certificates and protocols filled up with the results

<u>NOTE</u>: For the mechanical SAT commissioning of the pilot unit DDEQ will use its own protocols, elaborated as per point 11 in paragraph 3.1. At the end of the mechanical SAT a record will be signed both by MPP and DDEQ.

## 3.5.2.2.- <u>Electrical</u>

The following tests have been considered for the plant commissioning based on a scheduled commissioning of ten (10) working days. The foreseen test team is:

- Project Engineer (DDEQ)
- Erection Manager (DDEQ)
- Electrical official (DDEQ Contractor)
- MPP (permanent dedication of plant operator and technical staff)

The works to be done are:

- Check of the spin direction of motors.
- Check the power supply to all the instruments.
- Check the output signals from the instruments to the cabinet.
- Check alarms contacts in the cabinet and signals to be sent to the PLC.
- Simulate PLC input signals from the cabinet to instruments and control valves.
- Test of the lighting system of the reactor and the air cooling equipment.
- Initial configuration (settings) of instruments and sensors.
- Test certificates and protocols filled up with the results.

<u>NOTE</u>: For the electrical SAT commissioning of the pilot unit DDEQ will use its own protocols, elaborated as per point 11 in paragraph 3.1. At the end of the mechanical SAT a record will be signed both by MPP and DDEQ.

## 3.5.2.3.- <u>Control</u>

The control commissioning will not be started until the mechanical and electrical commissioning (as per indicated in points 3.5.2.1 and 3.5.2.2) is finished.

To perform this part of the commissioning it is mandatory that both the PLC cabinet and PLC/supervision programs are finished, verified and implemented, and all the interconnecting cabling between DDEQ's cabinet and the PLC cabinet (supplied by others) is done. The interconnecting cabling is also out from DDEQ's scope.

The following tests have been considered for the plant commissioning based on a scheduled commissioning of ten (10) working days. The foreseen test team is:

• Project Engineer (DDEQ)

Oferta nº:	EXS-M0127 Rev. 1
Título:	Module C-II supply
Cliente:	UAB / MPP

Fecha:	19/05/2010
Autor:	Roberto de Miguel
Archivo:	EXS-M0127 Rev 1.docx

De Dietrich PROCESS SYSTEMS DE DIETRICH EQUIPOS QUÍMICOS S.L.

- Project Engineer (Sherpa)
- MPP (permanent dedication of plant operator and technical staff)
- Electrical official (DDEQ Contractor + Sherpa Contractor) If required because of problems

The works to be done are:

- Verify the arrival of the inputs signal from DDEQ's cabinet to the PLC cabinet
- Verify the arrival of PLC commands to DDEQ's cabinet
- Verify consistency in the measurements in the onsite instruments with the supervisor lectures.

# We do not include any verification about the control loops program stability or performance, which is fully responsibility of the control supplier.

For further assistance or more extensive test and checks DDEQ will provide in point 5 "Price and Payment conditions" a daily net rate for engineers and technicians.

# 4.- EXCLUSIONS

The following services and works have not been taken into account in the present quotation and, therefore, are explicitly exclude of the scope of supply:

- Mechanical connections to UAB utilities nets (steam, air, CO₂, water,...)
- Gas analyzers are not defined yet by MPP. Therefore DDEQ has foreseen an estimation for its installation. Once MPP defines the gas analyzers desired for module C-II, DDEQ will evaluate the technical requirements. If necessary DDEQ will implement a Design change in the "Design Changes Record" as indicated in point 3.1.
- Electrical interconnecting cabling from DDEQ's electrical cabinet for compartment C-II and the PLC cabinet, and from the PLC cabinet to the control room computer. Neither the main power supply from UAB's general line to DDEQ's cabinet is included.
- Carrying out the communication test between the electrical cabinet of new supply for the compartment C-II and the PLC cabinet, and from the PLC cabinet to the control room computer is responsibility of the control supplier. DDEQ will attend these test as stated in point 3.5.2.3
- Commissioning of the PLC program and the supervisor system implemented in the control room computer. Neither the operation manual of these elements is included.
- Plant star-up with process fluids.
- Plant validation and/or qualification.
- Further engineering works, out of what is clearly stated in the present proposal, as per example:

<u>Note:</u> If any or the following works/tasks (or other not listed here) is required by the UAB, they will be invoiced separately accordingly to the "Daily rates" shown in point 5.2

- o Isometric drawings of the pipes but the process ones.
- Engineering works to accommodate UAB facilities or utilities to the requirements of the unit (connections, modifications in services nets,...)
- Drawings "as built" of the equipment showing the changes implemented over the approved detail constructive project.

<u>Note</u>: A revised version of the P&I'd drawing will be released free of charge, including all the changes, modifications and extension works implemented during the erection or

Oferta n°: EXS-M0127 Rev. 1 Título: Module C-II supply Cliente: UAB / MPP

commissioning of the equipment. In the same way, addendums over the manuals will be released to show **important changes** over the approved detail constructive project.

- Assistance and coordination with the Control Engineering involved in the project. The responsibility of control implementation is out of DDEQ's scope. A kick off meeting with the MPP's control contractor will be held at the UAB in order to clarify all the information provided by DDEQ to this contractor in the Data Package with points 1 to 9 as shown in point 3.1 (sensor list, motor list, automatic valves list, data sheets, control loops definitions, and final detailed control functional description).
- o Engineering works to assure the right integration of the different modules of the Melissa loop.
- Environmental engineering concerning liquid or gaseous effluents
- o Edition of Plant Operation Protocols for the field Operator
- Edition of Operational Emergencies and Alarms Management Protocol
- Edition of Sensor and Instrument Calibration Protocol
- Any legalization or CE marking of the pilot unit exceeding the Study over Machines and Equipment security edited by ICICT, S.A. (TÜV Rheinland Group)
- External sub-supplier management outside the scope of supply of the unit described in this proposal
- Official or legal projects, if necessary or required, as per example: Pressure Equipment Installation Project, Low Voltage Project, ....
- Further assistance services, out of what is clearly stated in the present proposal, as per example:
  - o Check over the operational sequences, one by one.
  - o Commissioning of the equipment with real process fluids.
  - o Validation of the sterilization of the plant prior to its start-up in production
  - o Once the commissioning phase is finished:
    - Optimization of the initial Control Settings and Alarm Set Points
    - Optimization of the Maintenance sequences and Cleaning instructions
  - o Others

# **5.- PRICE AND PAYMENT CONDITIONS**

# 5.1.- Price of the plant

The price of the Pilot Unit corresponding to Compartment C-II of the Melissa Pilot Plant according to the base equipment described in the Budget Rev. 0 included as Attachment 1 is:

#### NET PRICE (VAT excluded): -.669.301€.-

<u>Note</u>: The above price is a "fix price" according to "2.- Quotation Basis", that will allow the UAB/MPP to place an order to DDEQ in order to fulfill the required delivery schedule. If during the constructive detail engineering the relevant changes in the design appear they will be reflected in the "Design Changes Record" and the economic impact must be agreed between both parties.

# 5.2.- Daily rates for special assistance or test

Any further assistance, out of what is clearly stated in points 3.1 and 3.5 of this quotation, required by the MPP both, during the detail engineering (coordination with control engineering, other

Oferta nº:	EXS-M0127 Rev. 1	Fecha:	19/05/2010
Título:	Module C-II supply	Autor:	Roberto de Miguel
Cliente:	UAB / MPP	Archivo:	EXS-M0127 Rev 1.docx

suppliers,...) or during the commissioning of the plant, will be invoiced according to the following daily rates:

Senior Engineer (mechanical or electrical/control):		40 €/day
Assembling coordinator:	56	50 €/day
Mechanic:	48	35 €/day
Electrician:	48	35 €/day
Travel expenses:	According to de	estination

# 5.3.- Orders and Payment conditions

DDEQ proposes the following payment conditions:

- 20% down payment at order placement, payment at 90 days after invoicing
- 30% at delivery of points 1 to 9 of the Detail Engineering as stated in point 3.1, payment at 90 days after invoicing
- 20% at conclusion of mechanical FAT test as stated in point 3.5.1.1, payment at 90 days after invoicing
- 10% at conclusion of electrical FAT test as stated in point 3.5.1.2, payment at 90 days after invoicing
- 5% at delivery of manuals as stated in point 3.4, payment at 90 days after invoicing.
- 5% at conclusion of the equipment installation at the UAB facilities at Cerdanyola del Vallès, payment at 90 days after invoicing
- 5% at the conclusion of the commissioning as stated in point 3.5, payment at 90 days after invoicing.

# 6.- PROPOSAL VALIDITY

This proposal is valid for a period of two natural months.

# 7.- PROJECT PLANNING

In practice the development of the Project will be mainly influenced by UAB/MPP final decisions about different design alternatives and the administrative delays in order to place the order and contract writting. Also delays in intermediate approvals will cause a longer delivery time for the skid.

Assuming an optimal schedule in the development of the project, the schedule would be as shown in the annex.

# 8.- GUARANTEE

DE DIETRICH EQUIPOS QUÍMICOS S.L., guarantees for one (1) operation year, against manufacturing defects or material failures, all the equipment supply and the erection and assembly works executed by its contractors. The guarantee applies only to the repair or the reposition of the defect element or equipment, once the defect is verified, checked and accepted as guarantee issue.

Elements subjected to wear and/or ageing are not covered by the present guarantee. For example (but not limited) mechanical seals, measurement probes, joints,...Neither is covered negligence in the operation of the equipment and normal maintenance or cleaning operations over the equipment, as well as, accidental failures of the unit.

As mentioned before, the guarantee covers only the repair / replacement of the damaged/defect equipment. No other service or compensation is covered. For third party components or equipments, if any, the guarantee will be provided by the manufacturer.

Oferta nº:	EXS-M0127 Rev. 1
Título:	Module C-II supply
Cliente:	UAB / MPP

Fecha:	19/05/2010
Autor:	Roberto de Miguel
Archivo:	EXS-M0127 Rev 1.docx

# 9.- GENERAL PROJECT CONDITIONS AND LIABILITY LIMITATION

- The works covered under this proposal will be considered finished as soon as the commissioning tests stated in point 3.5 are finished satisfactorily.
- Design will be implemented under the guidelines and process requirements provided by the UAB, and according to the good engineering practices known by DDEQ. Before the order is placed to DDEQ it is mandatory that MPP and DDEQ establish a protocol to verify that the basic design elaborated fulfills the Technical Requirements (MPP/TN/2005/01 Version 1) and the Technical Note 62.2 edition 1. It has to be understood that a Prototype Pilot Plant might have some uncertainties that will not be clarified until the start up of the unit, and agreed changes might be required at that stage.
- The engineering works executed by DDEQ, and consequently equipment supply, do not mean that DDEQ has any liability in case the throughout put of the unit is less or different from the foreseen one. Process responsibility is charge of the MPP.
- DDEQ will not accept any liability for direct or indirect damages causes without the intention to harm as per example: production looses, third part claims, prestige looses, overall project delays,... DDEQ will not be responsible either for defects or damages arising from wrong or incomplete information delivered by the UAB/MPP.
- The MPP will designate a main interlocutor to evacuate through all the correspondence, question, doubts,..The same person will concentrate all the information and questions from the MPP to DDEQ.

# **10.- CONFIDENTIALITY**

All documents, data and information of the Project shared between MPP and DDEQ will be considered as confidential unless it is explicitly agree between both parts, is of public domain at the date of signing the contract or its use is necessary for the normal development of the project (inquiries or contracts to suppliers or contractors).

#### **PROPOSAL OF CHANGES IN PLANT DESIGN**

## 1. Object:

After the last meetings, some new requirements for the design have appeared. This document describes the proposed changes in the design of the plant regarding the Basic Engineering.

Documents of reference:	P&ID: DD-8550-Z1-100-01 rev. G		
	Influent/effluent tanks specifications: DD-8550-Z1-101-02 rev. B		
	Process gas buffer specifications: DD-8550-Z1-101-03 rev. B		
	Helium buffer specifications: DD-8550-Z1-101-04 rev. B		
	Reactor lighting system: DD-8550-Z1-101-06 rev. A		

**NOTE:** All the modifications on the P&ID have been indicated with a mark on the drawing.

# 2. Compartment II Gas system

There are two independent gas loops in the plant: venting system for influent/effluent tanks and process gas circuit. Each loop has been studied independently.

De Dietrich Equipos Químicos, S.L. Av. Príncep d'Asturies 43-45, 1r-5a E-08012 BARCELONA

$\checkmark$	PAGE 2 of 13	Ref. PRK-005449	

## 2.1. Venting system for tanks: influent and effluent

member of **De Dietrich** 

#### 2.1.1 Introduction

The influent/effluent tanks should be maintained, as all the plant, in anaerobic conditions.

The designed system has a way of allowing the inert gas (helium) into the tank, and a way to vent the gas when the pressure gets too high.

The helium is stored in a buffer tank, which is used for the inertization of influent and effluent tanks. This buffer must operate at a higher pressure than the process tanks so, for vented gas storage a gas compressor is needed.

A transmitter measures the influent/effluent tanks pressure and actuates over both automatic valves (helium inlet/helium vent).

#### 2.1.1 Helium buffer design: volume and characteristics

The buffer volume is defined from the volume of gas to storage and the compressor compression factor.

In order to define the volume of this buffer, it is important to take into consideration the process requirements. In view of the compressor required, there are two different situations: filling/emptying of tanks and steady operation.

During steady operation, the flow of helium vent coming from the effluent tank will be 0.5 - 9 l/h of gas (according to *MPP/TN/2005/01)*.

During the influent tank filling, the flow of helium will be higher. It will be defined from the time of the filling operation duration (flow of liquid).

# 2.1.1.1 Steady operation:

Vent flow: 0.5 - 9 l/h

The compressor defined (GC 2004 01) is a double diaphragm pump and its technical data are:

- Flow: 5 l/min
- Inlet pressure: 200 mbarg
- Outlet pressure: 2 barg
- Maximum permissible pressure: 3.5 barg
- Motor: 230V/50Hz/IP44

The compressor operation flow, 5 l/min (300 l/h), is given from the compressor high outlet pressure required. To achieve this flow in the compressor inlet, a recirculation around the compressor has been planned, in order to maintain 200 mbarg on the compressor inlet.

# A recirculation around the compressor requires: a new pressure transmitter and a new solenoid valve.

The gas compressor is always ON. The pressure transmitter (set-point: 200 mbar₉) modulate the solenoid valve permitting the gas recirculation to the compressor inlet in order to maintain 200 mbar₉. The recirculation rate would be high in order to maintain the compressor inlet flow in 5 l/min.

The high rate of circulated gas across the compressor can cause the gas warm-up as a consequence of the compression.

An exterior cooling coil is proposed for the helium buffer, operated manually depending on the temperature measured in the new thermometer installed on the tank.

De Dietrich Equipos Químicos, S.L.		CODE PROJECT: DD-	8550-Z1	Rev. A

	member of <b>De Dietrich</b>	DATE: 01/06/2010	PREPARED: J. G	UBERN	
	PROCESS SYSTEMS	PAGE 4 of 13	Ref. PRK-005449		

## 2.1.1.2 Filling/emptying of tanks

# After studding the compressors availability, a second compressor for the influent tank filling operation is required.

During the influent tank filling, helium vent flow will be higher than 5 l/min so, the compressor (GC 2004 01) will not be capable to compress this gas flow.

Before starting filling operation, vent flow should be manually diverted to the new compressor (GC 2004 02) which will be a double diaphragm pump and its technical data are:

- Flow: 15 l/min
- Inlet pressure: 200 mbarg
- Outlet pressure: 2 barg
- Maximum permissible pressure: 3.5 barg
- Motor: 230V/50Hz/IP44

**IMPORTANT NOTE:** In order to avoid the vacuum formation in tank, influent tank pressure control loop should be activated.

For the study of the buffer volume, starting points for the calculations are:

- This buffer should be <u>always</u> capable of maintaining the influent/effluent vessels pressure controlled in order to ensure the axenity of the plant.
- The gas will be a mixture of gases. Because of its composition, pure helium can be assumed (Ideal gas case)
- The minimum pressure of the buffer (during the effluent tank emptying) is 750 mbarg approximately.
- During nominal operation the buffer will work at 2 barg (compressor outlet pressure).

The resultant volume for the helium buffer is 240 L.

De Dietrich Equipos Químicos, S.L. Av. Príncep d'Asturies 43-45, 1r-5a		CODE PROJECT: DD-	8550-Z1	Rev. A
		CUSTOMER: UAB / M	ELiSSA	
E-08012 BARCELONA		PROJECT: MELiSSA C	COMPARTMENT I	Ι
	member of <b>De Dietrich</b>	DATE: 01/06/2010	PREPARED: J. C	UBERN
	PROCESS SYSTEMS	PAGE 5 of 13	Ref. PRK-005449	

## 2.1.2 Tanks venting system operational sequences.

The outlet pressure given by the compressors is 2 barg, work pressure of the helium buffer.

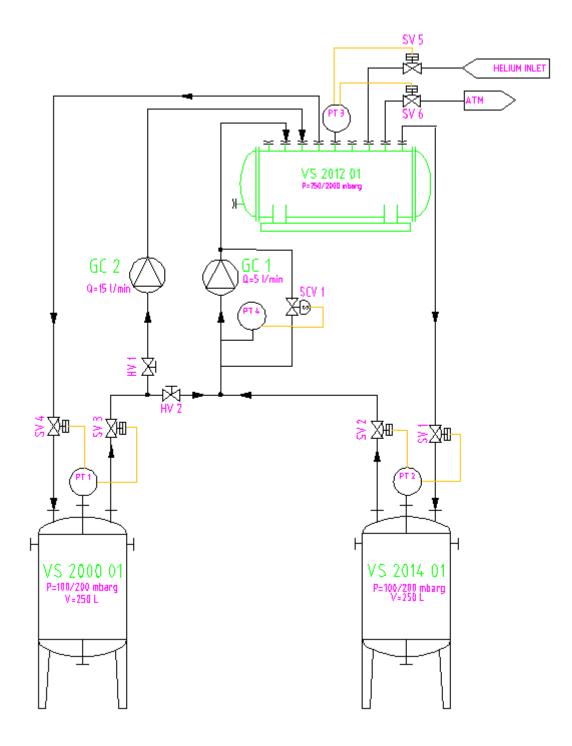

During the start-up of the plant, the helium buffer pressure should be lower than 2 barg in order to accept the 250 L of helium moved during the tank filling. As seen while doing the calculations, the buffer starting pressure (for plant starting-up) should be 750 mbarg approximately.

During nominal operation, the buffer will be pressurized (2 barg) and consequently, the emptying/filling of tanks sequence should be clearly defined.

**IMPORTANT NOTE:** It will be necessary to empty the effluent tank before filling the influent tank. While emptying the effluent tank, the buffer pressure will fall around the 750 mbarg. With buffer working at 750 mbarg is possible to continue operating with the foreseen pressure control loops of influent/effluent tanks and, when necessary, to fill the influent tank.

#### 2.1.2.1 Alarms and set-points value definition

It is important to define these values for a better understanding of the system operational.

**IMPORTANT NOTE:** All the values foreseen need to be better defined and adjusted during control SAT tests depending on the system stability.

a) Influent tank pressure transmitter (PT1):

- HH	: 250 mbarg	$\rightarrow$	open SV3
- H:	200 mbarg	$\rightarrow$	close SV3
- L:	100 mbarg	$\rightarrow$	close SV4
- LL:	50 mbarg	$\rightarrow$	open SV4
b) Effluent tank pres	sure transmitter	(PT2):	
- HH	: 250 mbarg	$\rightarrow$	open SV2
- H:	200 mbarg	$\rightarrow$	close SV2

- L: 100 mbarg  $\rightarrow$  close SV1

- LL:	50 mbarg	$\rightarrow$	open SV1

c) Buffer pressure transmitter (PT3):

- HH:	2200 mbarg	$\rightarrow$	open SV6
- H:	2000 mbarg	$\rightarrow$	close SV6
- L:	600 mbarg	$\rightarrow$	close SV5
- LL:	400 mbarg	$\rightarrow$	open SV5

E-08012 BARCELONA		PROJECT: MELISSA (	COMPARTMENT I	Ι
	member of <b>De Dietrich ()</b>	DATE: 01/06/2010	PREPARED: J. G	JUBERN
	PROCESS SYSTEMS	PAGE 8 of 13	Ref. PRK-005449	

# 2.1.2.1 Tanks emptying/filling sequences description

- 2.1.2.1.1 Nominal operation:
- A. Effluent tank emptying:
  - Start emptying the tank
  - When: effluent tank pressure < 50 mbarg (LL alarm)  $\rightarrow$  open the valve SV1. The helium is entering into the tank.
  - When the emptying is finished, the pressure of the tank will start increasing till tank pressure = [100-200] mbarg → close the valve SV1.

In this moment, 250 liters of helium have been moved to the effluent tank and the buffer pressure has fallen to 750 mbarg.

**IMPORTANT NOTE:** In this situation (Buffer pressure = 750 mbarg) is possible to continue with nominal operation or/and start the influent tank filling.

#### B. Influent tank filling:

- Close the manual valve HV1
- Open the manual valve HV2
- Start the compressor GC2
- Start filling the tank
- When: influent tank pressure > 250 mbarg (HH alarm)  $\rightarrow$  open the valve SV3. The helium of the tank is compressed by GC2 and sent to the buffer tank.
- When the filling is finished, the pressure of the tank will start decreasing till tank pressure = [100-200] mbarg  $\rightarrow$  close the valve SV3.

In this case, 250 liters of helium have been moved from the influent tank to the buffer and its pressure has rise to 2000 mbarg.

De Dietrich Equipos Químicos, S.L.		CODE PROJECT: DD-	8550-Z1	Rev. A	
Av. Princep d'Asturies 43-45, 1r-5a	CUSTOMER: UAB / MELiSSA		ELiSSA	SA	
E-08012 BARCELONA		PROJECT: MELiSSA C	COMPARTMENT I	I	
	De Dietrich	DATE: 01/06/2010	PREPARED: J. G	JUBERN	
	PROCESS SYSTEMS	PAGE 9 of 13	Ref. PRK-005449		

2.1.2.1.1 Plant start-up:

When the plant is totally filled-up with helium:

- Influent/Effluent tank pressure = [100-200] mbarg.
- Buffer pressure = 750 mbarg.
- Influent tank filling:
  - o Close the manual valve HV1
  - Open the manual valve HV2
  - o Start the compressor GC2
  - Start filling the tank
  - When: influent tank pressure > 250 mbarg (HH alarm) → open the valve SV3. The helium of the tank is compressed by GC2 and sent to the buffer tank.
  - When the filling is finished, the pressure of the tank will start decreasing till tank pressure = [100-200] mbarg → close the valve SV3.

In this case, 250 liters of helium have been moved from the influent tank to the buffer and its pressure has rise to 2000 mbarg.

The system is prepared for starting with nominal operation:

- Influent/Effluent tank pressure = [100-200] mbarg.
- Buffer pressure = 2000 mbarg.

# 2.2 Process circuit gas

#### 2.2.1 Introduction

The reactor gas outlet is compressed and sent to a buffer which is designed in order to increase the compressor stability as in this compartment, gas loop is a critical point for maintaining the axenity of the entire plant.

De Dietrich Equipos Químicos, S.L.		CODE PROJECT: DD-	8550-Z1	Rev. A
Av. Princep d'Asturies 43-45, 1r-5a		CUSTOMER: UAB / M	ELiSSA	
E-08012 BARCELONA		PROJECT: MELiSSA C	COMPARTMENT I	Ι
	member of <b>De Dietrich</b>	DATE: 01/06/2010	PREPARED: J. C	UBERN
	PROCESS SYSTEMS	PAGE 10 of 13	Ref. PRK-005449	

# 2.2.2 Bioreactor outlet gas buffer design: volume and characteristics

The compressor foreseen for the bioreactor gas outlet (the same as GC 2004 01) is a double diaphragm pump and its technical data are:

- Flow: 5 l/min
- Inlet pressure: 200 mbarg
- Outlet pressure: 2 barg
- Maximum permissible pressure: 3.5 barg
- Motor: 230V/50Hz/IP44

According to the document MPP/TN/2005/01, the bioreactor outlet flow will be 0 - 2 l/min so, a recirculation for the compressor is foreseen too.

A recirculation around the compressor requires: a new pressure transmitter and a new solenoid valve.

# 3. Bioreactor design: Illumination system

# 3.1. Introduction

After internal discussions, MPP has changed the illumination system requirements. The new number of lamps to install is from 190 (minimum number of lamps) to 270 (ideal) lamps.

Studying the feasibility of the mechanical installation of 270 lamps surrounding the glass cylinder, it has been seen that is possible. Another thing for taking into account is the thermal balance for refrigerating air system design.

# 3.2 Reactor thermal balance

- Number of lamps = 270
- Design flow of air =  $1700 \text{ m}^3/\text{h}$
- Illumination column diameter = 430 mm

# **NOTE:** The lamps are foreseen to install at 10 mm of the reactor glass jacket outlet wall.

- Air ducts diameter = 260 mm

De Dietrich Equipos Químicos, S.L.		CODE PROJECT: DD-	8550-Z1	Rev. A

## 4. Plant inertization system for plant starting-up

# For the inertization of the plant during start-up, a vacuum system is foreseen: vacuum pump, manual valve and manometer.

It will be necessary to connect the pump to the plant and do vacuum (10/20 mbar) followed of an inert gas inlet (900/100 mbar). This cycle should be repeated 2/3 times in order to guarantee the plant axenity.

Before disconnecting the horse of the system, it should be vented through the manual valve. If is necessary to take some gas sample, it is possible by means of the same valve.

	CODE PROJECT: DD-	8550-Z1	Rev. A

#### 5. Other design changes

#### 5.1 Plate heat exchanger for bioreactor jacket heating

member of De Dietrich PROCESSISYSTEMS

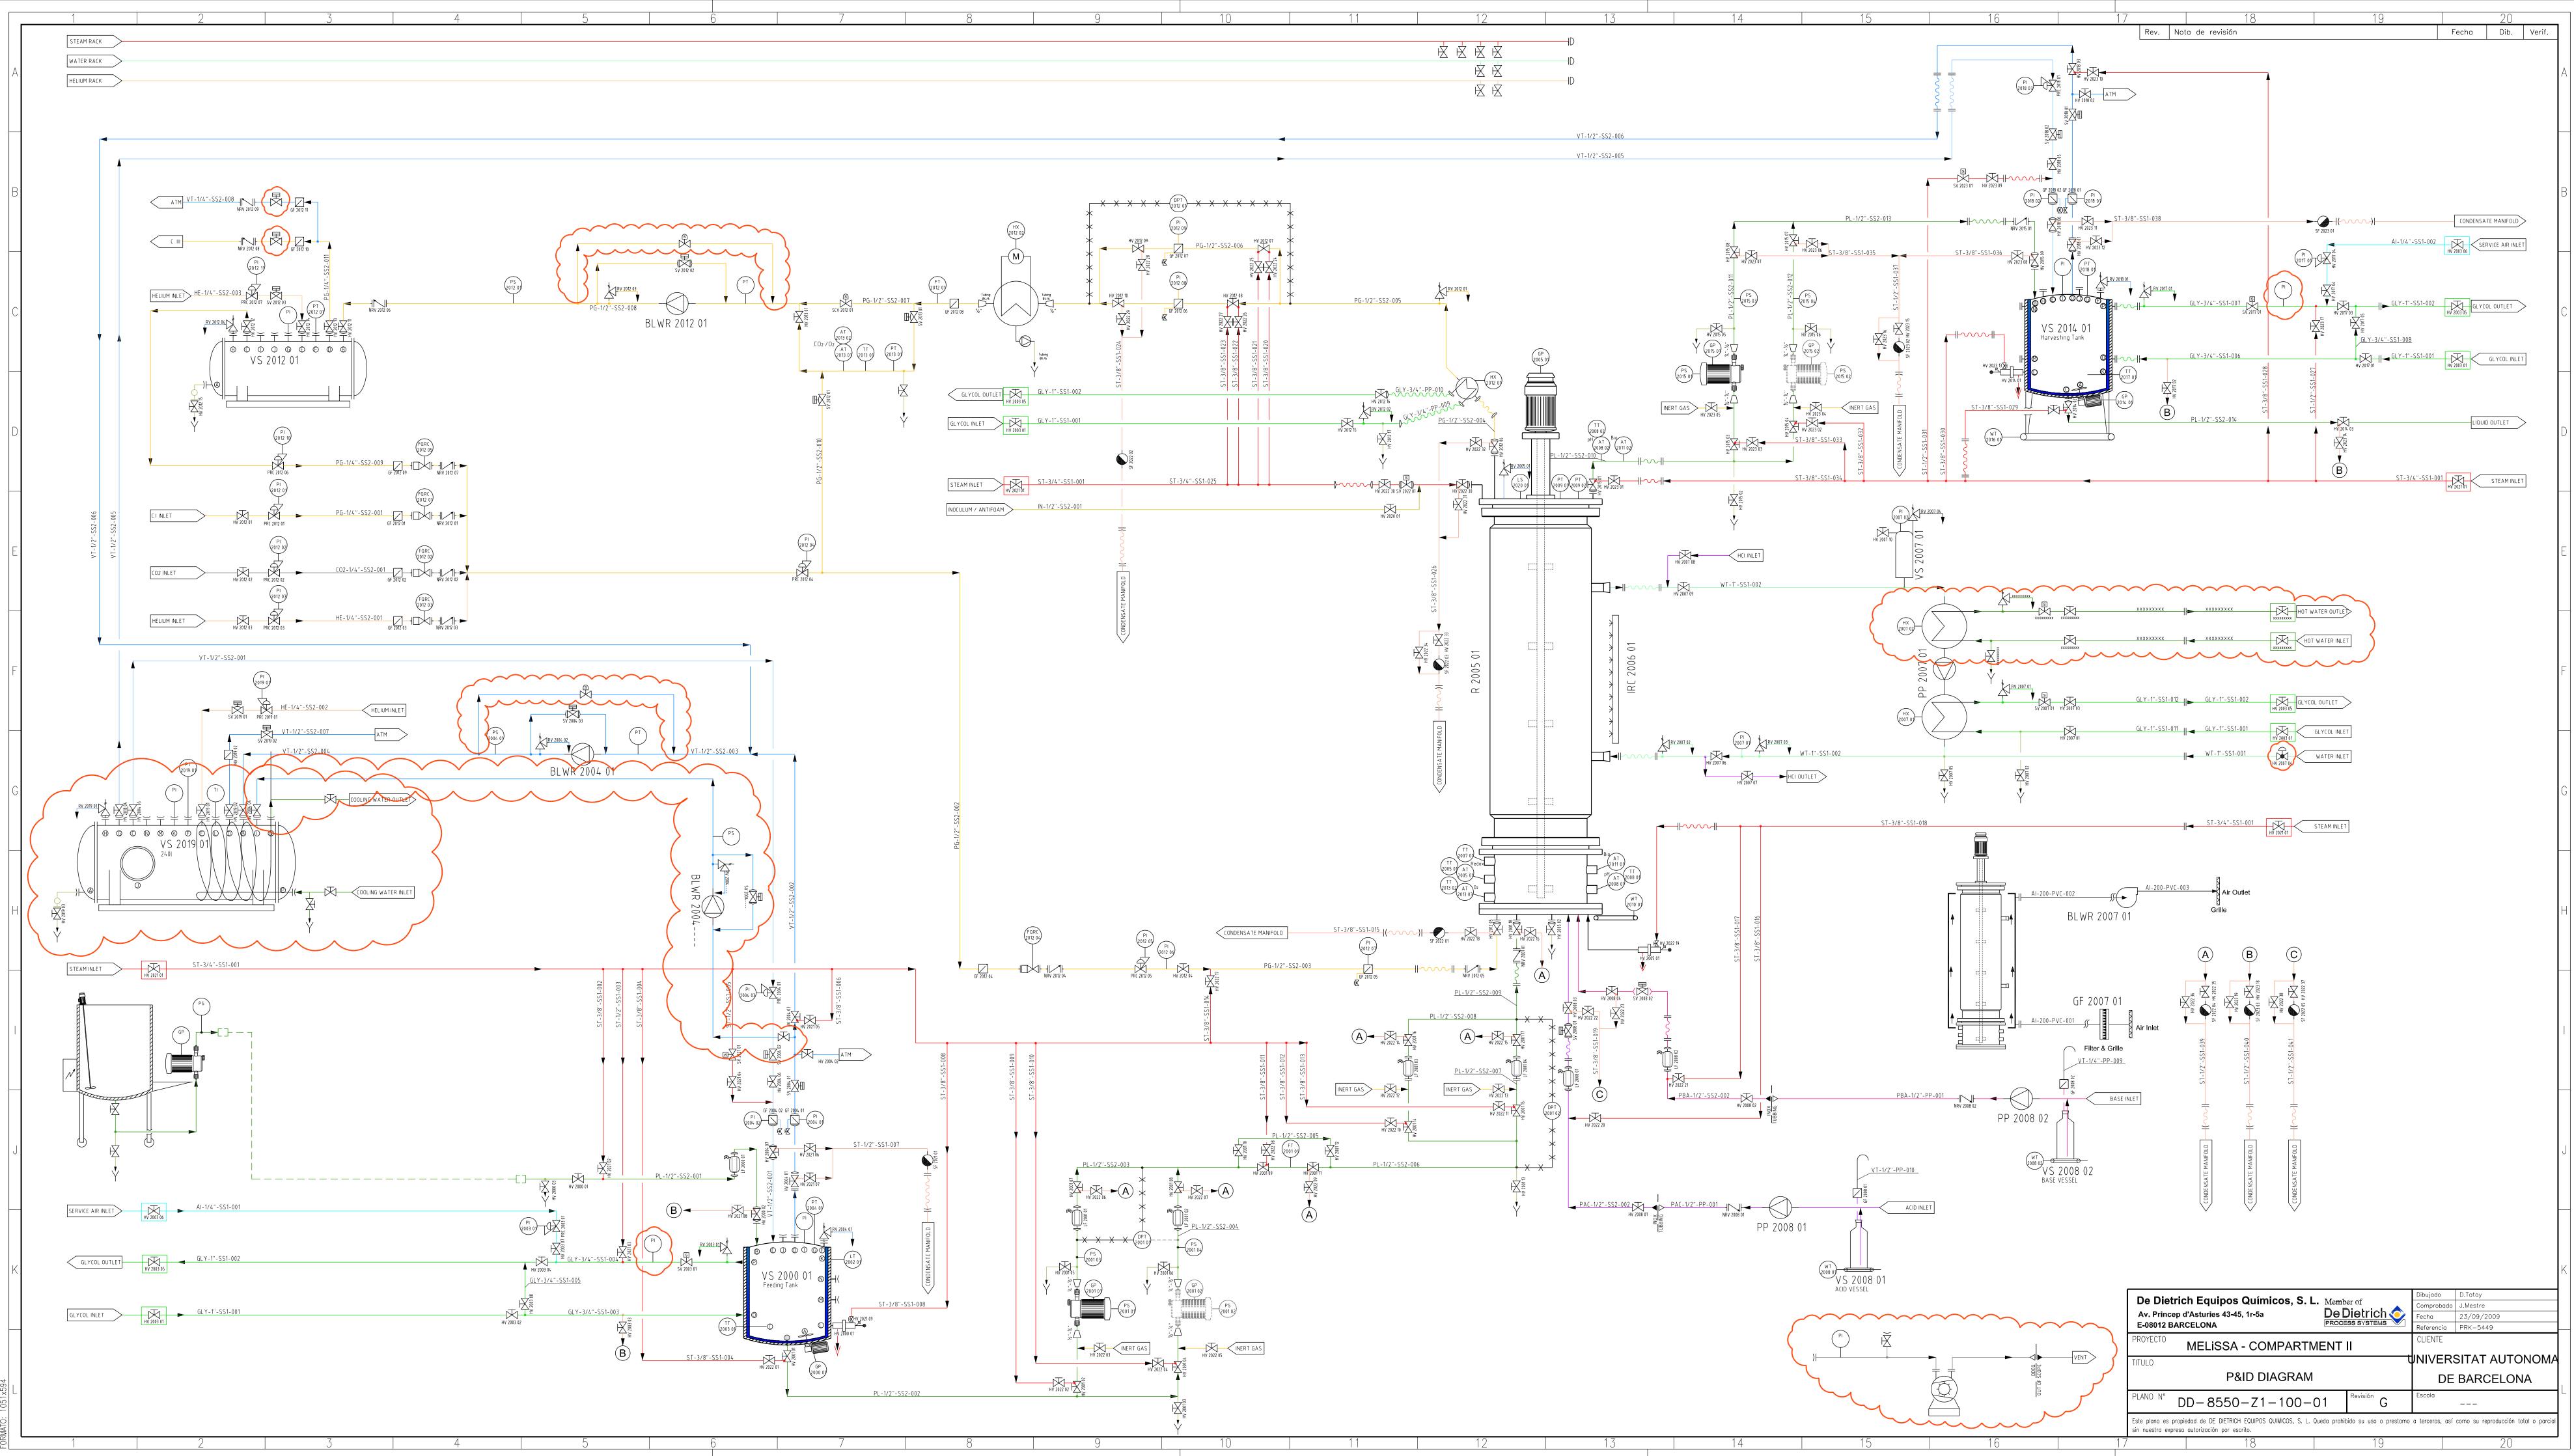

The electrical resistance that was previously foreseen has been replaced with a plate heat exchanger operating with hot water at 49 °C (available in MPP).

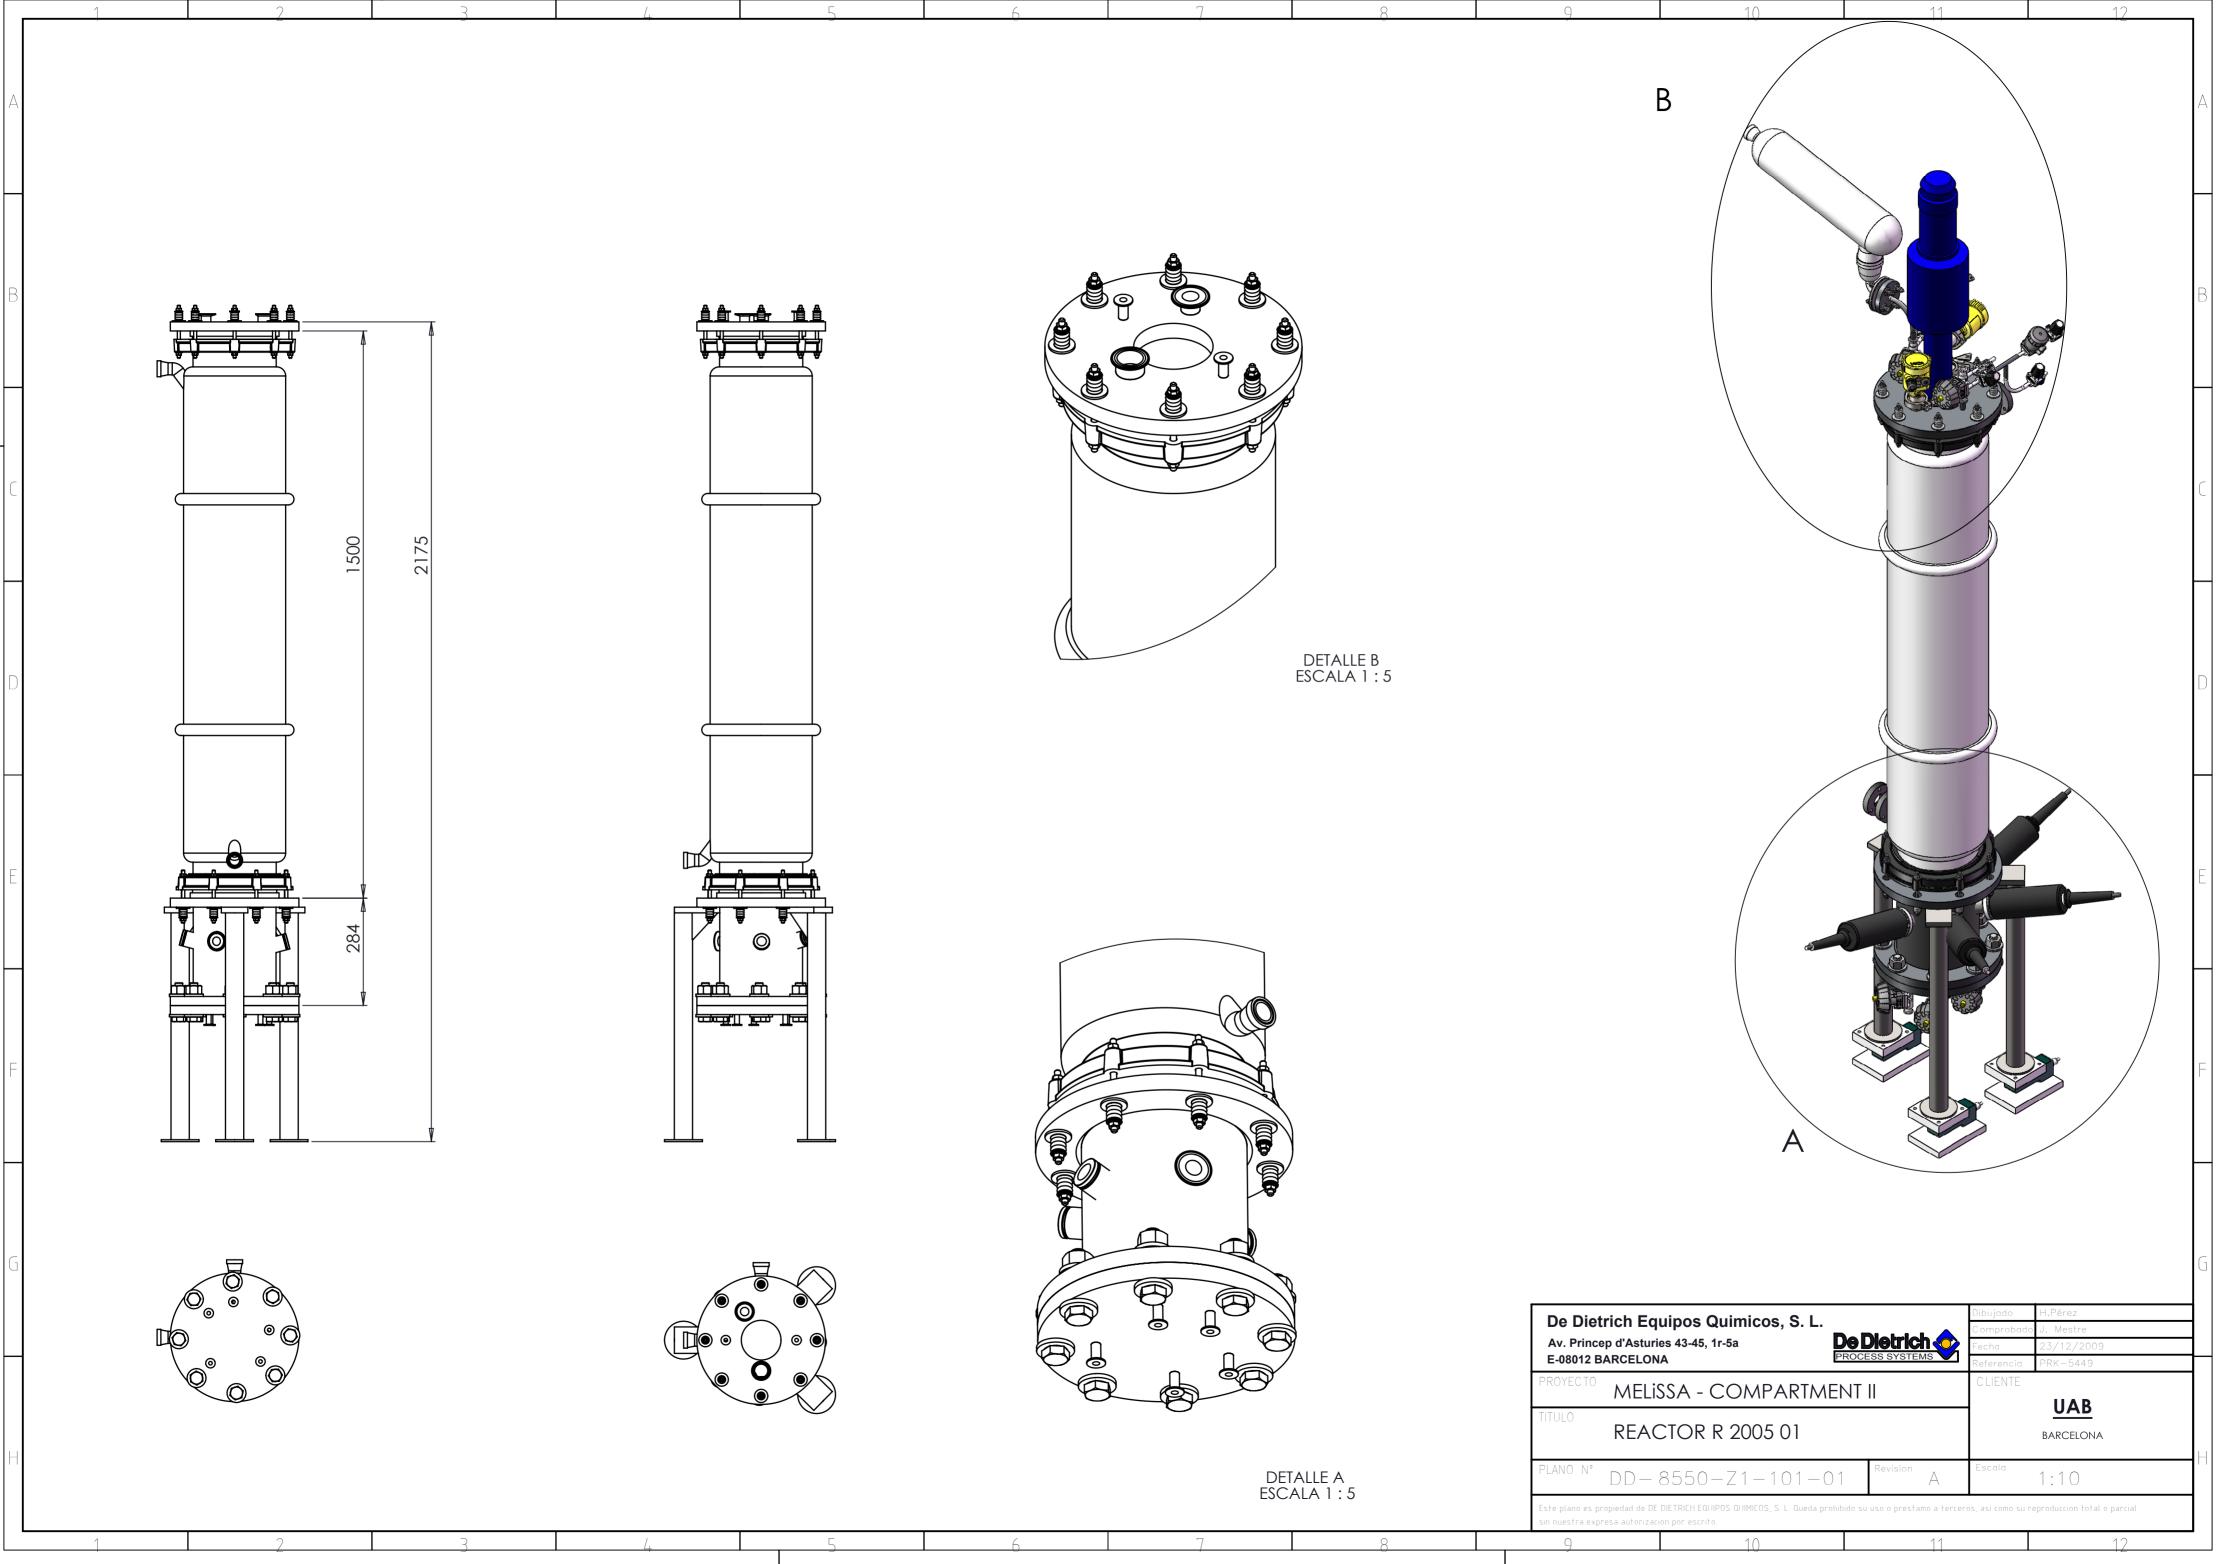

#### 5.2 Automatic valves for compartment produced gas outlet

Two automatic valves will be installed in the gas outlet instead of the gas flow meters/controllers that were previously foreseen. The reason for this change is that the way to interconnect the different MELiSSA compartments is still not decided by MPP people.

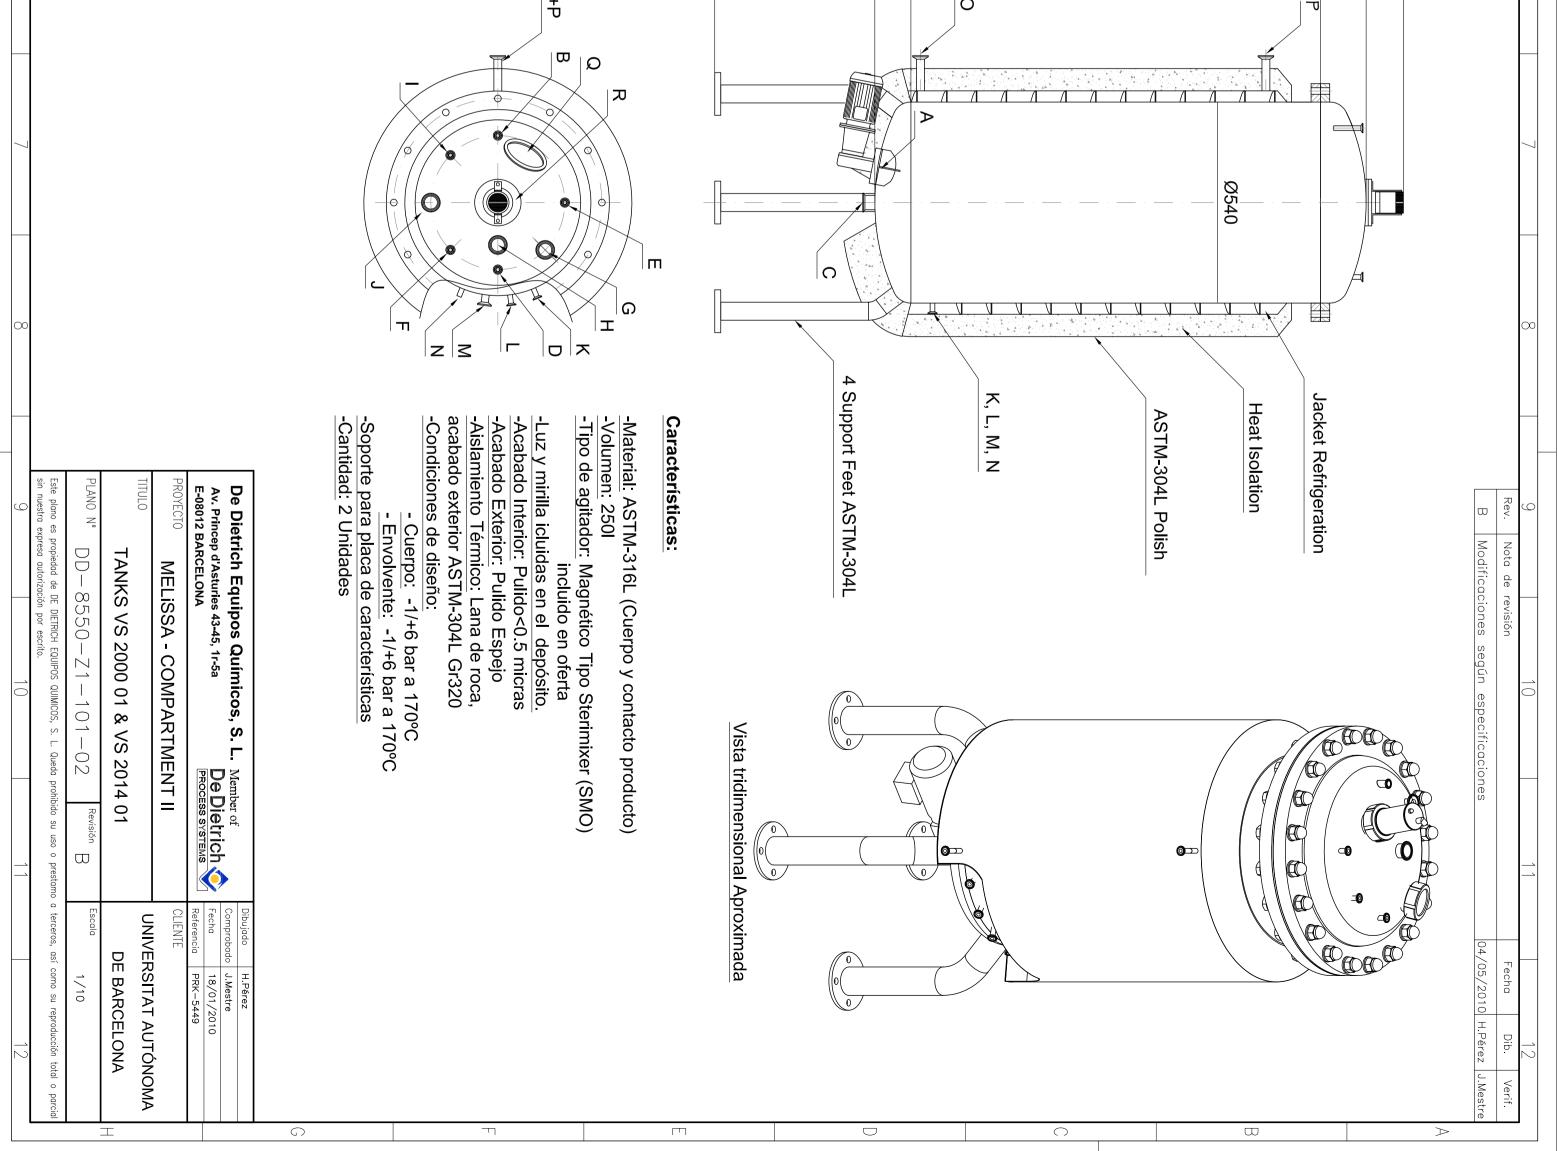

# 5.3 <u>Manometers in liquid storage tanks, gas buffers and influent/effluent refrigeration</u> jackets circuits

The installation of manometers was not scheduled because there is a pressure transmitter in each equipment, but thinking of the plant operation DDEQ things that is necessary to have a pressure local lecture.

# **1.- SUBJECT AND ANTECEDENTS**

The Universitat Autònoma de Barcelona, hereafter UAB, takes part in the MELiSSA Project of the European Space Agency (ESA) and the European Space Research and Technology Centre (ESTEC). The Project objective is to study and define parameters to achieve life conditions in the space during long journeys.

Included in this research project there is a pilot plant installed in the Departament d'Enginyeria Química de l'Escola Tècnica Superior d'Enginyeria (ETSE) of the UAB. This pilot plant is based in several compartments linked together in a close loop to process and recycle the ambient air, water, food and feces.

**De Dietrich Equipos Químicos**, hereafter **DDEQ**, was commissioned by the UAB for the basic designing of compartment C-II of the pilot plant, according to DDEQ quotation DDE-K1764-SI.

The present proposal **EXS-M0127 Rev. 1** for the construction and delivery of the skid corresponding to compartment C-II, is based in the documentation and designs generated during this basic engineering project development, the Design Review conclusions during June 2.010 and MPP/ESA subsequent decisions.

The proposal includes the following concepts:

- Carry out the required detailed and constructive engineering works to build up the plant
- Delivery of all the materials, equipments and goods.
- Carry out the assembly (mechanical and cabling) of the plant
- Commissioning of the plant (DDEQ scope)
- Delivery of operation manual and technical dossier of the plant

# 2.- QUOTATION BASIS

To make this proposal the following documents (Data package) coming from the basic designing works of MELISSA – Compartment II Pilot Reactor, have been used:

P&ID Diagram DD-8550-Z1-100-01 **Rev. I** modified as per Basic Design Review conclusions based on meeting hold on June 7th, telecom hold on June 8th and mail from E. Peiro dated June 28th.

Control Loops Diagram DD-8550-Z1-100-02 Rev. F (not up-dated until constructive engineering)

Main Equipments list Rev. B

Valves, filters and accessories list Rev. A (not up-dated until constructive engineering)

Piping list Rev. A (not up-dated until constructive engineering)

Instruments list Rev. A (not up-dated until constructive engineering)

Motor list Rev. A (not up-dated until constructive engineering)

Main Equipments Technical Specification Rev. B

Instruments Specification Rev. A (not up-dated until constructive engineering)

Electrical & Control Signals List Rev. A (not up-dated until constructive engineering)

Nevertheless, it has to be understood that a Prototype Pilot Plant might have some uncertainties that will not be clarified until the start up of the unit, and agreed changes might be required at that stage.

Oferta nº:	EXS-M0127 Rev.

Cliente:	UAB / MPP

Fecha: 04/08/2010 Autor: Roberto de Miguel Archivo: EXS-M0127 Rev 2

# 3.- SCOPE OF SUPPLY

# **3.1.-** Constructive Detail Engineering Contents

The Investment Budget has been calculated considering a Constructive Detail Engineering packet of 780h to execute the following works:

- 1. Definition and Execution of Final P&I'd.
- 2. Definition of utilities required and estimated consumptions.
- 3. Definition and Execution of Final Control Loops Diagram.
- 4. Final Lay-out drawing.
- 5. Final list of: Sensors, valves, lines and components.
- 6. Datasheets of sensors, valves and main equipments.
- 7. Constructive drawings of:
  - Liquid storage tanks and accessory vessels
  - Reactor
  - Lighting arrangement and supports
  - Frame, supports and skid
- 8. Sufficient drawings for the pipe assembly, including isometric drawing of process lines.
- 9. Final detailed control functional description.

As soon as this first Data package is ready it will be sent to MPP for revision and approval. Once the approval is received, the rest of the Detail Engineering will be carried out and the purchases orders to suppliers will star to be released.

At this stage MPP will deliver the detailed control functional description plus the sensor and motor list with their datasheets to the control supplier (Sherpa) to star working on the PLC definition and program, as well as the scada control screens.

A "kick off meeting" with the MPP's control contractor will be held at the UAB in order to clarify all the information provided by DDEQ to this contractor in the Data Package with points 1 to 9 (sensor list, motor list, automatic valves list, data sheets, control loops definitions, and final detailed control functional description). The estimated duration of this meeting is about one day and will be held with project engineers involved in the project.

- 10. HAZOP Analysis over final lay-out and P&ID
- 11. Prepare the "Test Protocols" for DDEQ Test and Commissioning as per stated in point 3.5. The protocols will be agreed with MPP.
- 12. Electrical diagrams for the electrical cabinet. CE marking and legalization of the new cabinet.
- 13. CE marking and legalization of liquid storage tanks and buffer.
- 14. Machines and Equipment Security Evaluation, made by ICICT, S.A. (TÜV Rheinland Group), for a Pilot Plant module installed at the UAB facilities in Cerdanyola del Vallès.

Like for the C-IVa module the notified body will do a Study over Machines and Equipment security based on:

R.D. 1215/97 about Minimum Security and Health Measures for the use of equipments.

R.D. 1495/86 about Safety in Machines

Oferta nº:	EXS-M0127 Rev.
Título:	MELiSSA module C-II supply
Cliente:	UAB / MPP

Fecha:	04/08/2010
Autor:	Roberto de Miguel
Archivo:	EXS-M0127 Rev 2

- UNE-EN norms of application

The notified body will execute the following works:

- Hazards identification
- Risk analysis according the hazards detected
- Consensus about safety technical solutions based on UNE-EN norms

Final conclusions report and Machinery Conformity / Non Conformity Certificate emission.

# NOTE: The delivery of points 10-14 will be according the attached planning.

To assure the traceability and control over the design, DDEQ will implement a "Design Changes Record". The objectives of this record are:

- a. Assure traceability over design changes: date, problem detected, reason, decision, final change introduced, possible delays, cost.
- b. Assure approval from both MPP and DDEQ.
- c. Decision about who will take the cost of the change.

NOTE: This document will be prepared by DDEQ and shared with MPP for approval.

# 3.2.- Mechanical Turn-key supply of the compartment C-II

Mechanical turn-key supply of the mechanical and electrical equipment corresponding to the Compartment C-II of the Melissa Pilot Plant in accordance with the "Quotation basis" shown in point 2 and the Detail Engineering to be carried out according to point 3.1.

Previously to any purchase DDEQ will inform UAB which is the selected supplier or contractor. Should the UAB has any inconvenience regarding a supplier or contractor DDEQ will change to another one, unless this might have an economic impact on the project or cause a delay in the schedule.

Mechanical Erection and installation of the unit at DDEQ warehouse and UAB laboratories at Cerdanyola del Vallés

2 Copies of the final dossier

# **3.3.- Electrical supply for the compartment C-II**

Following we provide a description of the power and control system that is foreseen for the for the compartment II of MELiSSA Pilot Plant.

Documents of reference:

- Control Loops P&ID (DD-8550-Z1-100-02 rev. F) (not up-dated until constructive engineering)
- Electrical and control signals list rev. A (not up-dated until constructive engineering)
- Room Lay-Out (DD-8550-Z1-102-02 rev. 0) (not up-dated until constructive engineering)

# **3.3.1.-** Situation of the electrical cabinet

The electrical cupboards are foreseen by DDEQ out of the skid in order to save space in it and considering the room constraints.

MPP mentioned that the C-I PLC cabinet could be moved to the corner near the GC in order to have more space for the C.II skid (to be confirmed by NTE).

04/08/2010

Roberto de Miguel EXS-M0127 Rev 2

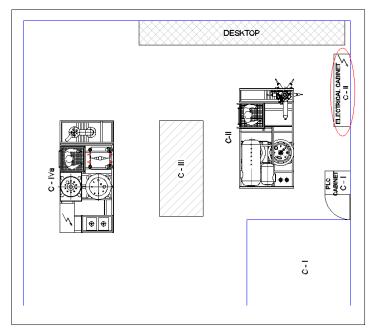

Oferta nº:	EXS-M0127 Rev.	Fecha:
Título:	MELiSSA module C-II supply	Autor:
Cliente:	UAB / MPP	Archivo:

The designed electrical cabinet is 1800x2600x400 (height, width, depth) and it is conceptually divided in two different parts: power and control. By control we mean concentrate all the control signals from site instruments to the cabinet, to communicate with the main PLC and supervisor (delivered and programmed by others).

It can be physically divided too in order to be able to go through the pilot plant door.

The situation in the plant of the electrical cabinet is the next:

<u>NOTE:</u> For further details about dimensions refer to Room Lay-Out (DD-8550-Z1-102-02 rev. 0) included in the ANNEX II of the Engineering dossier.

# 3.3.2.- Power and control panel

Supply of **power** and control panel, dimensions 1800 height, 2600 width and 400 depth, mechanized, mounted, connected and with the following elements and devices:

- 1 Base panel and accessories
- 1 Mounting board
- 1 Cooper bar and accessories
- 1 Overvoltage protection Class D IEC 1024-1
- 1 Light switch "On service"
- 1 General switch
- 1 Main ground-fault protection and thermal-magnetic circuit breaker
- 1 Emergency stop push button
- 1 "Emergency stop activated" indicator (red led)
- 1 White light indicator "Voltage in"
- 1 Acknowledge push button
- 1 Security check push button
- 1 Safety relay PREVENTA
- 2 Power supply 24Vdc/10 A
- 1 Single ground-fault protection for all frequency converters

Oferta nº:	EXS-M0127 Rev.
Título:	MELiSSA module C-II supply
Cliente:	UAB / MPP

Fecha:	04/08/2010
Autor:	Roberto de Miguel
Archivo:	EXS-M0127 Rev 2

De Dietrich PROCESS SYSTEMS DE DIETRICH EQUIPOS QUÍMICOS S.L.

- 1 General ground-fault protection for all the instrumentation
- 1 DIMMER 3-phase to control lightning columns
- 1 Transformer 3-phase 5KVA
- 1 Single thermal-magnetic protection for 10 lightning columns
- 1 Current metering and 4-20mA conversion
- 1 DIMMER protection security circuit against low load in the output
- 1 RS232/Ethernet converter
- $1 \rightarrow$  Wiring of the following control signals:
  - 71 Digital inputs
  - 52 Analogical inputs
  - 49 Digital outputs
  - 19 Analogical outputs
- 6 Galvanic isolators
- $1 \rightarrow$  Set of thermal-magnetic circuit breakers
- $6 \rightarrow$  Single-phase frequency converters 1,5KW
- 1 Set of Contactors
- $1 \rightarrow$  Fan and filter
- $1 \rightarrow$  Set of circuit breaker auxiliary switch
- $1 \rightarrow$  Set of connection strips
- $1 \rightarrow$  Elements and devices mounted and connected according CE directive
- $1 \rightarrow$  Design, technical managing and documentation

# **IMPORTANT NOTES:**

- > It is not foreseen the connection to the plant main power/pneumatic supply.
- > All consumers will be equipped with ground-fault protection and thermal-magnetic circuit breaker.
- > The material included in these lists is the necessary for the electrical and control signals according to the Basic Engineering Design and conclusions arose from the Design review done in June.

# 3.3.3.- Electrical erection and commissioning of compartment C-II

The estimated materials which are required are:

- 20 m galvanized cable tray 60x60 mm (without cover).
- 20 m galvanized cable tray 300x60 mm (without cover).
- Trays mounting accessories.
- 160 m shielded cable 4x0,5 mm²
- 20 m blue shielded cable 8x0,5 mm²
- 250 m cable 4x0,5 mm²
- 200 m shielded cable 4x1,5 mm²
- 300 m shielded cable 3x1,5 mm²

Oferta nº:	EXS-M0127 Rev.
Título:	MELiSSA module C-II supply
Cliente:	UAB / MPP

Fecha:	04/08/2010
Autor:	Roberto de Miguel
Archivo:	EXS-M0127 Rev 2

- 250 m flexible conduit.
- 10 m heat-shrinkable tubing.
- Other connection and mounting accessories.
- Cable signalling.
- 100 m pneumatic tubing.
- 3 emergency stop pushbuttons.
- Other pneumatic accessories.

# IMPORTANT NOTES:

If it is physically possible the power cables will be installed as separated as possible from the signal ones.

# 3.3.4.- Photo-bioreactor Lighting system

The illumination system consists of 250-270 halogen lamps which surround the glass jacketed pipe section (DN200, L=1500m).

The type of lamps used will be the specified in the technical note 62.2 and are: OSRAM 12V, 20W BAB 38°.

# **3.3.5.- Lighting system structure**

The lights will be set-up on a portable structure made of stainless-steel with 270 lamps of 20W 12V each, surrounded by a hybrid stainless steel – transparent plastic fairing, through which the cooling air can circulate.

It will include 2 or 3 connection boxes sited on the half height of the structure.

These boxes will receive the cables from the lamps to link in 2 o 3 cables all the power to the main electric panel.

# 3.3.6.- Phoenix material

Set of Phoenix materials:

- Analogical cable FLK 50/EX-DR/800
- Digital cable FLK 50/4X14/EZ-DR/800
- Interface modules VARIOFACE FLKM50/MOFI-TSX.
- Connectors PLC-V8/FLK14/OUT.
- Connectors PLC-V8/FLK14/IN.
- Relay PLC_RSP-24UC/21AU (24VDC).
- Plug-in bridges FBST 500-PLC BU
- Separating plates PLC-ATP-BK.

# **IMPORTANT NOTES:**

➢ We have included Phoenix Contact cables of 8 m. These cables will have in both sizes de connectors for flat cable BUT WILL NOT INCLUDE THE ADAPTERS TO CONNECT TO THE QUANTUM MODULES. These adapters must be supplied by the PLC cabinet manufacturer.

Oferta nº:	EXS-M0127 Rev.
Título:	MELiSSA module C-II supply
Cliente:	UAB / MPP

Fecha:	04/08/2010
Autor:	Roberto de Miguel
Archivo:	EXS-M0127 Rev 2

# 3.4.- Manuals:

The manuals will be issued in English once points 1 to 9 of the Detail Engineering are approved by the MPP and while the module skid is pre-assembly in DDEQ's warehouse. The Operation Manuals should be delivered to MPP the latest at the same time the pilot skid is installed in the UAB's laboratories and the Technical Dossier no later than two months after the skid is installed.

# 3.4.1.- Operation Manual:

The Operation Manual will contain:

- 1. INTRODUCTION SYSTEM DESCRIPTION
- 2. COMPONENT DESCRIPTION
- 3. PLANT CONTROL DESCRIPTION
- 4. PLANT SAFETY
- 5. GENERAL PROCEDURES
- 6. INSTALLATION START UP
- 7. INSTALLATION SHUT DOWN
- 8. NOMINAL OPERATION
- 9. SIP (STERILIZATION SEQUENCES)
- 10. SERVICE ON HARDWARE
- 11. PROCESS FOLLOW UP
- 12. CALIBRATIONS

# 3.4.2.- Technical Dossier

The Technical Dossier will contain

- Final P&I'd.
- Final Control Loops Diagram.
- Final Lay-out drawing.
- Constructive drawings of:
  - Liquid storage tanks and accessory vessels
  - Reactor
  - Lighting arrangement and supports
  - Frame, supports and skid
- Sufficient drawings for the pipe assembly, including isometric drawing of process lines.
- Final list of: Sensors, valves, lines and main equipments, and the corresponding Datasheets
- Final detailed control functional description.
- Electrical diagrams for the electrical cabinet. CE marking and legalization of the cabinet.

Oferta nº:	EXS-M0127 Rev.
Título:	MELiSSA module C-II supply
Cliente:	UAB / MPP

Fecha:	04/08/2010
Autor:	Roberto de Miguel
Archivo:	EXS-M0127 Rev 2

- CE marking and legalization of the liquid storage tanks.
- Welding controls and welding certificates for the storage tanks.
- Certificate issued by ICICT, S.A. (TÜV Rheinland Group) after the "Machines and Equipment Security Evaluation" for the Pilot Plant module installed at the UAB facilities in Cerdanyola del Vallès.
- Compilation of operation, maintenance manuals and technical documents provided by the different suppliers of the equipment installed in the plant. Whenever it is possible this information will be supplied in electronic format as well.
- Spare part list for two years operation

# **3.5.-** Test and commissioning of the Pilot Unit

#### 3.5.1.- FAT by DDEQ

#### 3.5.1.1.- <u>Mechanical</u>

Once the skid is pre-assembled at DDEQ's warehouse and before the shipment to UAB's laboratories MPP will assist to FAT verification consisting in:

- Verify that final approved P&I'd diagram has been observed in the assembly
- Verify that the sensors, valves and equipments used are the specified ones according the project datasheets.
- Verify supports robustness.
- Test certificates and protocols filled up with the results.

<u>NOTE</u>: For the mechanical FAT commissioning of the pilot unit DDEQ will use its own protocols, elaborated as per point 11 in paragraph 3.1. At the end of mechanical FAT a record will be signed both by MPP and DDEQ and the shipment date to UAB's laboratories will be agreed. The duration of this FAT test will be 2 or 3 working days.

No test with fluids will be included in the mechanical FAT as there are not such services at DDEQ's warehouse.

#### 3.5.1.2.- <u>Electrical</u>

The cabling of the C-II module will be executed at UAB premises. Therefore the Electrical FAT will focus only in the power and control cabinets delivered by DDEQ. This FAT will take place at DDEQ's electrical contractor premises.

The Electrical FAT will consist in:

- Verify that all the sensors, automatic valves and equipments included in the P&I'd appears in the electrical diagrams.
- Verify that the electrical diagrams have been observed during the manufacturing of the cabinets.
- Test the power and control cabinets simulating the signals.
- Test the lighting system for the photo bio-reactor
- Test certificates and protocols filled up with the results.

<u>NOTE:</u> For the electrical FAT commissioning of the pilot unit DDEQ will use its own protocols, elaborated as per point 11 in paragraph 3.1, and tests will be done by DDEQ and electric

Oferta nº:	EXS-M0127 Rev.	Fecha:	04/08/2010
Título:	MELiSSA module C-II supply	Autor:	Roberto de Miguel
Cliente:	UAB / MPP	Archivo:	EXS-M0127 Rev 2

supplier. An electrical FAT record will be signed both by MPP and DDEQ and the shipment date to UAB's laboratories will be agreed. The duration of this FAT test will be 3 working days.

#### 3.5.2.- SAT by DDEQ

#### 3.5.2.1.- <u>Mechanical</u>

The following tests have been considered for the plant commissioning based on a scheduled commissioning of fifteen (15) working days. The foreseen test team is:

- Project Engineer (DDEQ)
- Erection Manager (DDEQ)
- Mechanic official (DDEQ Contractor)
- MPP (permanent dedication of plant operator and technical staff)

The works to be done are:

- Pressure test with water for the liquid tanks and lines, as well as the reactor.
- Pressure test with compressed air of the Gas lines and buffers.
- Pressure test with steam of the steam and condensate lines. After that a resume of sterilization sequences will be done. Resume means:
  - Not waiting all the sterilization time required until the temperature is reached
  - Reactor, tanks and complete sections between reactor and tanks will be tested with steam during the accorded and defined time. Sequences for individual equipment will not be checked.
- Pressure test with water of the heating / cooling circuits of the jacketed equipment.
- Test certificates and protocols filled up with the results

<u>NOTE</u>: For the mechanical SAT commissioning of the pilot unit DDEQ will perform the tests using its own protocols, elaborated as per point 11 in paragraph 3.1. At the end of the mechanical SAT a record will be signed both by MPP and DDEQ.

#### 3.5.2.2.- <u>Electrical</u>

The following tests have been considered for the plant commissioning based on a scheduled commissioning of ten (10) working days. The foreseen test team is:

- Project Engineer (DDEQ)
- Erection Manager (DDEQ)
- Electrical official (DDEQ Contractor)
- MPP (permanent dedication of plant operator and technical staff)

The works to be done are:

- Check of the spin direction of motors.
- Check the power supply to all the instruments.
- Check the output signals from the instruments to the cabinet.
- Check alarms contacts in the cabinet and signals to be sent to the PLC.
- Simulate PLC input signals from the cabinet to instruments and control valves.

Oferta nº:	EXS-M0127 Rev.
Título:	MELiSSA module C-II supply
Cliente:	UAB / MPP

Fecha:	04/08/2010
Autor:	Roberto de Miguel
Archivo:	EXS-M0127 Rev 2

- Test of the lighting system of the reactor and the air cooling equipment.
- Initial configuration (settings and range definition) of instruments and sensors with process parameters supplied by MPP to the control supplier. The optimization and fine adjustment of the settings will be responsibility of the MPP and therefore its implementation over the equipments on site.
- Test certificates and protocols filled up with the results.

<u>NOTE</u>: For the electrical SAT commissioning of the pilot unit DDEQ will use its own protocols, elaborated as per point 11 in paragraph 3.1 and tests will be done by DDEQ and electrical supplier. At the end of the mechanical SAT a record will be signed both by MPP and DDEQ.

#### 3.5.2.3.- Communication commissioning

The communication commissioning will not be started until the mechanical and electrical commissioning (as per indicated in points 3.5.2.1 and 3.5.2.2) is finished and all the interconnecting cabling between DDEQ's cabinet and the PLC cabinet (supplied by others) is done. The interconnecting cabling is also out from DDEQ's scope.

The following tests have been considered for the plant commissioning based on a scheduled commissioning of five (5) working days. The foreseen test team is:

- Project Engineer (DDEQ)
- Project Engineer (Sherpa)
- MPP (permanent dedication of plant operator and technical staff)
- Electrical official (DDEQ Contractor + Sherpa Contractor)

The works to be done are:

- Verify the arrival of the inputs signal from DDEQ's cabinet to the PLC cabinet
- Verify the arrival of PLC commands to DDEQ's cabinet
- Verify consistency in the measurements in the onsite instruments with the PLC lectures.

We do not include any verification about the control loops program stability or performance, which is fully responsibility of the control supplier.

<u>NOTE</u>: For the electrical communication commissioning of the pilot unit DDEQ will use Sherpa's protocols. At the end of the electrical communication commissioning a record will be signed by MPP, SHERPA and DDEQ

At the conclusion of all the Test and Commissioning process as stated in points 3.5.1 and 3.5.2 a "Pilot Unit Acceptance Document" will be signed between MPP and DDEQ. From that moment, the risk and responsibility of the unit will be transferred to MPP, being then authorized to operate the plant alone or with other suppliers. At the same time, the guarantee period of twelve (12) months will start.

For further assistance or more extensive test and checks DDEQ will provide in point 6 "Price and Payment conditions" a daily net rate for engineers and technicians.

# 4.- RUN TEST OF THE MODULE

As an additional service to MPP, DDEQ is ready to assist to a complete run test of the pilot module when the control supplier has finalized the delivery and test of its scope of supply.

We have considered the assistance during five (5) working days of our Project Engineer to help MPP staff during the integration under operation of the control with the hardware.

Autor:	Roberto de Miguel
Archivo:	EXS-M0127 Rev 2

Leadership and execution of the Run Test is MPP responsibility and our task is to resolve doubts and give advices during the Trials. We will also take care of failures of the hardware but not accept any responsibility because of misuse, (in manual or automatic operation), of the hardware.

If additional presence over the five (5) foreseen days is required DDEQ will charge MPP according the rates indicated in point 6 "Price and Payment conditions".

# 5.- EXCLUSIONS

The following services and works have not been taken into account in the present quotation and, therefore, are explicitly exclude of the scope of supply:

- Mechanical connections to UAB utilities nets (steam, air, CO₂, water,...)
- Fan, filter and coolant battery for the lighting cooling system. Its installation (air tubes to the side of the C-II skid) and electrical connection (cabling to our cabinet) is not included. The electrical maneuver will be in our cabinet and the control ins Sherpa's scope.
- Gas analyzer connection different of what was implemented in Module C-IVa. If additional requirements are demanded by MPP DDEQ will implement a Design change in the *"Design Changes Record"* as indicated in point 3.1.
- Electrical interconnecting cabling from DDEQ's electrical cabinet for compartment C-II and the PLC cabinet, and from the PLC cabinet to the control room computer. Neither the main power supply from UAB's general line to DDEQ's cabinet is included.
- Carrying out the control commissioning neither commissioning of the PLC program and the supervisor system implemented in the control room computer. The operation manual of these elements is also out of our scope.
- Changes over design as per MPP Hazop analisys. If additional requirements are demanded by MPP DDEQ will implement a Design change in the *"Design Changes Record"* as indicated in point 3.1.
- Plant star-up with process fluids.
- Plant validation and/or qualification.
- Further engineering works, out of what is clearly stated in the present proposal, as per example:

<u>Note</u>: If any or the following works/tasks (or other not listed here) is required by the UAB, they will be invoiced separately accordingly to the "Daily rates" shown in point 5.2

- o Isometric drawings of the pipes but the process ones.
- Engineering works to accommodate UAB facilities or utilities to the requirements of the unit (connections, modifications in services nets,...)
- Drawings "as built" of the equipment showing the changes implemented over the approved detail constructive project.

<u>Note</u>: A revised version of the P&I'd drawing will be released free of charge, including all the changes, modifications and extension works implemented during the erection or commissioning of the equipment. In the same way, addendums over the manuals will be released to show **important changes** over the approved detail constructive project.

- o Control Commissioning of the plant.
- Engineering works to assure the right integration of the different modules of the Melissa loop.
- Environmental engineering concerning liquid or gaseous effluents

Oferta nº:	EXS-M0127 Rev.	Fecha:	04/08/2010
Título:	MELiSSA module C-II supply	Autor:	Roberto de Miguel
Cliente:	UAB / MPP	Archivo:	EXS-M0127 Rev 2

- o Edition of Plant Operation Protocols for the field Operator
- o Edition of Operational Emergencies and Alarms Management Protocol
- o Edition of Sensor and Instrument Calibration Protocol
- Any legalization or CE marking of the pilot unit exceeding the Study over Machines and Equipment security edited by ICICT, S.A. (TÜV Rheinland Group)
- External sub-supplier management outside the scope of supply of the unit described in this proposal
- Official or legal projects, if necessary or required, as per example: Pressure Equipment Installation Project, Low Voltage Project, ....
- Further assistance services, out of what is clearly stated in the present proposal, as per example:
  - o Commissioning of the equipment with real process fluids.
  - o Validation of the unit
  - Once the commissioning phase is finished:
    - Optimization of the initial Control Settings and Alarm Set Points
    - Optimization of the Maintenance sequences and Cleaning instructions
  - o Others

# **6.- PRICE AND PAYMENT CONDITIONS**

## 6.1.- Price of the plant

The price of the Pilot Unit corresponding to Compartment C-II of the Melissa Pilot Plant according to the base equipment described in the Budget Rev. 2 included as Attachment 1 is:

#### NET PRICE (VAT excluded): -.742.777€.-

The tank for media preparation and its electrical cabinet, pump, required instrumentation and manual valves as well as the assembling of this set has been quoted separately. The price for this system, according to the base equipment described in the Budget Rev. 2 included as Attachment 1 is:

NET PRICE (VAT excluded): -.20.584€.-

<u>Note</u>: The above price is a "fix price" according to "2.- Quotation Basis", that will allow the UAB/MPP to place an order to DDEQ in order to fulfill the required delivery schedule. If during the constructive detail engineering the relevant changes in the design appear they will be reflected in the "Design Changes Record" and the economic impact must be agreed between both parties.

#### 6.2.- Daily rates for special assistance or test

Any further assistance, out of what is clearly stated in points 3.1 and 3.5 of this quotation, required by the MPP both, during the detail engineering (coordination with control engineering, other suppliers,...) or during the commissioning of the plant, will be invoiced according to the following daily rates:

Project E	ngineer (mechanical or electrical/	control):	740 €/day
Assembli	ng coordinator:		560 €/day
Mechani	с:		485 €/day
Electricia	n:	485 €/day	
Oferta nº: Título: Cliente:	EXS-M0127 Rev. MELiSSA module C-II supply UAB / MPP	Fecha: Autor: Archivo:	04/08/2010 Roberto de Miguel EXS-M0127 Rev 2

Travel expenses:

According to destination

# 6.3.- Order and Payment conditions

DDEQ proposes the following payment conditions:

- 20% down payment with the order, payment at 90 days after invoicing
- 30% at delivery of points 1 to 9 of the Detail Engineering as stated in point 3.1, payment at 90 days after invoicing
- 25% at conclusion of mechanical FAT test as stated in point 3.5.1.1, payment at 90 days after invoicing
- 10% at conclusion of electrical FAT test as stated in point 3.5.1.2, payment at 90 days after invoicing
- 5% at delivery of manuals as stated in point 3.4.1, payment at 90 days after invoicing.
- 5% at conclusion of the equipment installation at the UAB facilities at Cerdanyola del Vallès, payment at 90 days after invoicing
- 5% at the conclusion of the SAT commissioning as stated in point 3.5.2, payment at 90 days after invoicing.

# 7.- PROPOSAL VALIDITY

This proposal is valid for a period of two natural months.

# 8.- PROJECT PLANNING

In practice the development of the Project will be mainly influenced by UAB/MPP final purchasing decision and the administrative delays in order to place the order and contract writing. Also delays in intermediate approvals will cause a longer delivery time for the skid.

Assuming an optimal schedule in the development of the project, the schedule would be as shown in the annex.

# 9.- GUARANTEE

DE DIETRICH EQUIPOS QUÍMICOS S.L., guarantees for one (1) operation year, against manufacturing defects or material failures, all the equipment supply and the erection and assembly works executed by its contractors. The guarantee applies only to the repair or the reposition of the defect element or equipment, once the defect is verified, checked and accepted as guarantee issue.

Elements subjected to wear and/or ageing are not covered by the present guarantee. For example (but not limited) mechanical seals, measurement probes, joints,...Neither is covered negligence in the operation of the equipment and normal maintenance or cleaning operations over the equipment, as well as, accidental failures of the unit.

As mentioned before, the guarantee covers only the repair / replacement of the damaged/defect equipment. No other service or compensation is covered. For third party components or equipments, if any, the guarantee will be provided by the manufacturer.

# **10.- GENERAL PROJECT CONDITIONS AND LIABILITY LIMITATION**

• The works covered under this proposal will be considered finished as soon as the commissioning tests stated in point 3.5 are finished satisfactorily and the "Pilot Unit Acceptance Document" is signed between MPP and DDEQ.

Oferta nº:	EXS-M0127 Rev.
Título:	MELiSSA module C-II supply
Cliente:	UAB / MPP

Fecha: 04/08/2010							
Autor:	Roberto de Miguel						
Archivo:	EXS-M0127 Rev 2						

- Design will be implemented under the guidelines and process requirements provided by the UAB, and according to the good engineering practices known by DDEQ.
- A design review was conducted in June 2.010 to verify that the basic design elaborated fulfills the Technical Requirements (MPP/TN/2005/01 Version 1) and the Technical Note 62.2 edition 1. Some changes emerged from that review agreed between MPP and DDEQ and a new P&I'd version has been released, being the main basis for the current proposal. Again, it has to be understood that a Prototype Pilot Plant might have some uncertainties that will not be clarified until the real start up of the unit, and agreed changes might be required at that stage.
- The engineering works executed by DDEQ, and consequently equipment supply, do not mean that DDEQ has any liability in case the throughout put of the unit is less or different from the foreseen one. Process responsibility is charge of the MPP.
- DDEQ will not accept any liability for direct or indirect damages causes without the intention to harm as per example: production looses, third part claims, prestige looses, overall project delays,... DDEQ will not be responsible either for defects or damages arising from wrong or incomplete information delivered by the UAB/MPP.
- The MPP will designate a main interlocutor to evacuate through all the correspondence, question, doubts,..The same person will concentrate all the information and questions from the MPP to DDEQ.

# 11.- CONFIDENTIALITY

All documents, data and information of the Project shared between MPP and DDEQ will be considered as confidential unless it is explicitly agree between both parts, is of public domain at the date of signing the contract or its use is necessary for the normal development of the project (inquiries or contracts to suppliers or contractors).



                                                                       | 10
